## OVERVIEW

---

### Organization

Citigroup Inc. (Citi) is a global diversified financial services holding company whose businesses provide consumers, corporations, governments and institutions with a broad, yet focused, range of financial products and services, including consumer banking and credit, corporate and investment banking, securities brokerage, trade and securities services and wealth management. Citi has approximately 200 million customer accounts and does business in nearly 160 countries and jurisdictions.

Effective January 1, 2022, Citi reorganized its reporting into three operating segments: *Institutional Clients Group (ICG)*, *Personal Banking* and *Wealth Management (PBWM)* and *Legacy Franchises*, with *Corporate/Other* including activities not assigned to a specific operating segment, as well as discontinued operations.

Citibank, N.A. (Citibank) is a commercial bank and indirect wholly owned subsidiary of Citigroup. Citibank's principal offerings include investment banking, commercial banking, cash management, trade finance and e-commerce; private banking products and services; consumer finance, credit cards, and mortgage lending; and retail banking products and services.

### Regulatory Capital Standards and Disclosures

Citi is subject to regulatory capital standards issued by the Federal Reserve Board (FRB), which constitute the U.S. Basel III rules. These rules establish an integrated capital adequacy framework, encompassing both risk-based capital ratios and leverage ratios.

The U.S. Basel III rules set forth the composition of regulatory capital (including the application of regulatory capital adjustments and deductions), as well as two comprehensive methodologies (a Standardized Approach and Advanced Approaches) for measuring total risk-weighted assets. Total risk-weighted assets under the Advanced Approaches, which are primarily models-based, include credit, market, and operational risk-weighted assets.

In addition, Citi, as an Advanced Approaches banking organization under the U.S. Basel III rules, is also required to publicly disclose certain qualitative and quantitative information regarding Citi's capital structure and adequacy, credit risk and related mitigation policies, securitizations, equity exposures, market risk, operational risk, Supplementary Leverage ratio, and other matters (the Basel III Advanced Approaches Disclosures). These Basel III Advanced Approaches Disclosures constitute the often referred to "Pillar 3 Disclosures."

Moreover, these Citigroup Basel III Advanced Approaches Disclosures were reviewed and approved in accordance with Citi's Basel Public Disclosures Policy, the latter of which has been approved by Citi's Board of Directors.

For additional information regarding the U.S. Basel III rules, see "*Capital Resources*" in Citi's 2022 Annual Report on Form 10-K (2022 Form 10-K). Further, see Citi's FFIEC 101 Report,

"*Regulatory Capital Reporting for Institutions Subject to the Advanced Capital Adequacy Framework*" as of December 31, 2022 (Fourth Quarter 2022 FFIEC 101 Report), available on the National Information Center's website.

## SCOPE OF APPLICATION

---

### **Basis of Consolidation**

Citi's basis of consolidation for both financial and regulatory accounting purposes is in accordance with U.S. GAAP. The U.S. Basel III rules are applied to these consolidated financial statements and off-balance sheet exposures.

Certain of Citi's equity investments in entities carried under either the cost or equity method of accounting for U.S. GAAP purposes are neither consolidated nor deducted from regulatory capital under the U.S. Basel III rules, but rather are appropriately risk-weighted. However, so-called "significant investments" (greater than 10% ownership or exposure) in the common stock of unconsolidated financial institutions are subject, under the U.S. Basel III rules, to potential deduction in arriving at Common Equity Tier 1 (CET1) Capital. To the extent not deducted, these significant investments are risk-weighted.

In addition, under the U.S. Basel III rules, Citi must deduct 50% of the minimum regulatory capital requirements of insurance underwriting subsidiaries from each of Tier 1 Capital and Tier 2 Capital.

For further information regarding Citi's more significant subsidiaries and basis of consolidation, see Note 1, "*Summary of Significant Accounting Policies*" and Note 22, "*Securitizations and Variable Interest Entities*" in the Notes to Consolidated Financial Statements in Citi's 2022 Form 10-K.

### **Funds and Capital Transfer Restrictions**

For information regarding restrictions or other major impediments on the transfer of funds and capital distributions between Citi entities, see Note 19, "*Regulatory Capital*" in the Notes to Consolidated Financial Statements in Citi's 2022 Form 10-K.

### **Regulated Subsidiaries' Capital**

Total Capital for each of Citi's regulated banking subsidiaries was in excess of their respective minimum total capital requirements as of December 31, 2022. Likewise, Citi's regulated principal broker-dealer subsidiaries were also in compliance with their net capital requirements at that date.

Further, the aggregate amount of surplus capital in Citi's insurance subsidiaries included in consolidated Total Capital as of December 31, 2022 was \$0.9 billion. Separately, no Citi insurance subsidiary had a capital shortfall relative to its minimum regulatory capital requirement as of such date.

### Regulatory Capital Instruments

Aside from common stock, Citi's other regulatory capital instruments consist of outstanding noncumulative perpetual preferred stock, certain trust preferred securities and subordinated debt.

Citigroup common stock entitles each holder to one vote per share for the election of directors and for all other matters to be voted on by Citigroup's common shareholders. Except as otherwise provided by Delaware law, the holders of common stock vote as one class. Upon a liquidation, dissolution or winding up of Citigroup, the holders of common stock share ratably in the assets remaining and available for distribution after payments to creditors and provision for any preference of any preferred stock. There are no preemptive or other subscription rights, conversion rights or redemption or scheduled installment payment provisions relating to the common stock. For additional information on the terms and conditions of Citi's common stock, see Citi's Consolidated Balance Sheet and "*Unregistered Sales of Equity Securities, Repurchases of Equity Securities and Dividends—Equity Security Repurchases*" in Citi's 2022 Form 10-K.

Each series of Citigroup preferred stock is noncumulative and perpetual and ranks senior to the common stock but ranks equally with each other series of outstanding preferred stock as to dividends and distributions upon a liquidation, dissolution or winding up of Citigroup. Unless full noncumulative dividends for the dividend period then ending have been paid, Citigroup cannot pay any cash dividends on any common stock or other capital stock ranking junior to the preferred stock during the subsequent dividend period. Holders of preferred stock generally do not have voting rights other than those described in the corresponding certificate of designation and as specifically required by Delaware law. For additional information on the terms and conditions of Citi's outstanding preferred stock, see Note 21, "*Preferred Stock*" in the Notes to Consolidated Financial Statements in Citi's 2022 Form 10-K.

Citigroup Capital XIII trust preferred securities, which are permanently grandfathered as Tier 1 Capital under the U.S. Basel III rules, are the only trust preferred securities that qualify as regulatory capital instruments. For additional information regarding the structure and terms of Citi's currently outstanding trust preferred securities, see Note 18, "*Debt*" in the Notes to Consolidated Financial Statements in Citi's 2022 Form 10-K.

Citi's subordinated debt contains customary provisions applicable to all debt securities, with the exception that subordinated debt contains no financial covenants and the only events of default are those related to bankruptcy, insolvency, receivership and other similar actions. Subordinated debt ranks subordinated and junior in right of payment to all senior indebtedness of the issuer. If there is any insolvency, bankruptcy, liquidation or other similar proceeding relating to the issuer, its creditors or its property, then all senior indebtedness must be paid in full before any payment may be made to any holders of subordinated debt.

The only events of default for subordinated debt are certain events of insolvency or bankruptcy.

Subordinated debt can have varying maturities, with a minimum maturity of five years. Interest can be fixed, floating or a combination. The issuer call option can be exercised only after a minimum of five years following issuance. For additional information regarding Citi's currently outstanding subordinated debt, see Note 18, "*Debt*" in the Notes to Consolidated Financial Statements in Citi's 2022 Form 10-K.

### Regulatory Capital Tiers

For Citi's CET1 Capital, Tier 1 Capital and Total Capital, and related components, as of December 31, 2022, see "*Capital Resources*" in Citi's 2022 Form 10-K, and Schedule A in Citi's Fourth Quarter 2022 FFIEC 101 Report.

### Capital Management

Citi's capital management framework is designed to ensure that Citigroup and its principal subsidiaries maintain sufficient capital consistent with each entity's respective risk profile, management targets and all applicable regulatory standards and guidelines. For additional information regarding Citi's capital management, see "*Capital Resources—Capital Management*" in Citi's 2022 Form 10-K.

### Stress Testing Component of Capital Planning

Citi is subject to an annual assessment by the FRB as to whether Citigroup has effective capital planning processes as well as sufficient regulatory capital to absorb losses during stressful economic and financial conditions, while also meeting obligations to creditors and counterparties and continuing to serve as a credit intermediary. This annual assessment includes two related programs: The Comprehensive Capital Analysis and Review (CCAR) and Dodd-Frank Act Stress Testing (DFAST).

Citigroup's Stress Capital Buffer is determined each year through DFAST. For additional information regarding the stress testing component of capital planning, see "*Forward-Looking Statements*", "*Capital Resources—Stress Testing Component of Capital Planning*" and "*Risk Factors—Strategic Risks*" in Citi's 2022 Form 10-K.

### Economic Capital

Citi calculates and allocates economic capital (risk capital) across the company in order to consistently measure risk taking amongst business activities and to assess risk-reward relationships.

Citi measures risk capital as the amount of capital required to absorb potential unexpected economic losses resulting from extremely severe events over a one year time period, assuming Citi remains a going concern. Economic losses include any decline in the economic value of assets and any increase in the economic value of liabilities. The drivers of economic losses are risks which, for Citi, are broadly categorized as credit risk, market risk and operational risk. Citi's risk capital framework is reviewed and enhanced on a regular basis in light of market developments and evolving practices.

The calculation of economic losses depends on whether the risk is classified as "price risk" or "value risk." Price risk is the potential unexpected loss of market value over a one year horizon. Value risk is the potential unexpected loss based on realizable value to maturity. If any of the following criteria are met, the risk is "price risk;" otherwise it is "value risk:"

- intent to sell or hedge exposures at market price;
- funding with short-term liabilities (sufficient long-term financing, even under stress situations, should be

available to support all exposures whose risk capital is determined based on value risk); or

- mark-to-market accounting or equivalent (e.g., fair value).

Citi's methodology does not include any offset for expected income. For accrual instruments such as loans, this means that risk capital is calculated as the difference between potential total loss at a high confidence level and expected loss (no offset for interest revenue or fee revenue). For mark-to-market instruments, such as those carried in the trading book, this means that the unexpected loss is based on price volatility and assumes an expected total return of zero. Citi's risk capital framework covers both systematic risk and idiosyncratic risk, where material. It is designed to avoid pro-cyclicality, meaning that changes in risk capital are primarily driven by changes in position, not by changes in shocks or assumptions. Citi's methodology covers all risk types, legal entities, and Citi's reportable segments. To account for tail risks, Citi's methodology includes fat-tailed distributions (non-normal price behavior) for individual market factors and high correlation assumptions during stress periods.

As part of its internal evaluation of capital adequacy relative to its internal measurement of economic risk, Citi adds a risk capital buffer to its measured risk capital. The risk capital buffer is a very prudently estimated amount of additional economic risk not captured in risk capital due to three sources:

- A very prudently estimated amount for enhancements to risk capital models not yet in production, or for known missing risks not yet captured.
- A very prudently estimated amount for potential unidentified model errors.
- A very prudent amount for a potential increase in risk taking over the next year above the level measured by current risk capital.

## Advanced Approaches Risk-Weighted Assets

The following table presents the components of Citi's Basel III Advanced Approaches risk-weighted assets as of December 31, 2022 and September 30, 2022.

**Table 1: Advanced Approaches Risk-Weighted Assets**

<i>In millions of dollars</i>	<b>December 31, 2022</b>	<b>September 30, 2022</b>
<b>Credit Risk-Weighted Assets:</b>		
<b>Wholesale Exposures</b>	\$ 410,736	\$ 416,357
<b>Retail Exposures:</b>		
Residential Mortgage Exposures	20,683	21,117
Qualifying Revolving Exposures	110,682	104,922
Other Retail Exposures	20,718	21,434
<b>Total Retail Exposures</b>	<b>\$ 152,082</b>	<b>\$ 147,474</b>
<b>Securitization Exposures</b>	\$ 47,929	\$ 45,013
<b>Central Counterparty Exposures</b>	11,904	12,220
<b>Equity Exposures:</b>		
Equity Exposures Subject to the Simple Risk Weight Approach	26,226	22,640
Equity Exposures to Investment Funds	2,819	2,695
<b>Total Equity Exposures</b>	<b>\$ 29,045</b>	<b>\$ 25,335</b>
<b>Other Exposures<sup>(1)</sup></b>	<b>\$ 98,670</b>	<b>\$ 96,135</b>
<b>Total Credit Risk-Weighted Assets Subject to Supervisory 6% Multiplier<sup>(2)</sup></b>	<b>\$ 750,366</b>	<b>\$ 742,532</b>
<b>Supervisory 6% Multiplier</b>	\$ 45,022	\$ 44,552
<b>Credit Valuation Adjustments (CVA)</b>	65,685	67,752
<b>Less: Excess Eligible Credit Reserves Not Included in Tier 2 capital</b>	558	—
<b>Total Credit Risk-Weighted Assets</b>	<b>\$ 860,514</b>	<b>\$ 854,836</b>
<b>Market Risk-Weighted Assets:</b>		
Regulatory Value-at-Risk (VaR) <sup>(3)</sup>	\$ 12,456	\$ 10,510
Regulatory Stressed Value-at-Risk (SVaR) <sup>(4)</sup>	22,703	24,545
Incremental Risk Charge (IRC) <sup>(5)</sup>	3,919	3,301
Comprehensive Risk Measure (CRM)	901	1,070
Standard Specific Risk Charge (SSRC)	19,350	25,374
Securitization Charges <sup>(6)</sup>	7,664	7,099
Other <sup>(7)</sup>	7,856	9,810
<b>Total Market Risk-Weighted Assets</b>	<b>\$ 74,849</b>	<b>\$ 81,709</b>
<b>Operational Risk-Weighted Assets</b>	<b>\$ 297,774</b>	<b>\$ 298,061</b>
<b>Total Risk-Weighted Assets</b>	<b>\$ 1,233,138</b>	<b>\$ 1,234,606</b>

(1) Primarily consists of net deferred tax assets, net premises and equipment, receivables, intangible assets and other assets not subject to the application of internal models in deriving credit risk-weighted assets under the U.S. Basel III rules.

(2) Under the U.S. Basel III rules, a supervisory 6% multiplier is applied to all components of credit risk-weighted assets other than derivatives CVA.

(3) Includes \$2,646 million and \$2,313 million add-on for Risk Not In the Model (RNIM) as of December 31, 2022 and September 30, 2022, respectively.

(4) Includes \$8,312 million and \$11,510 million add-on for RNIM as of December 31, 2022 and September 30, 2022, respectively.

(5) Includes \$588 million and \$577 million add-on for RNIM as of December 31, 2022 and September 30, 2022, respectively.

(6) Includes specific risk charges attributable to securitization positions, as well as non-modeled correlation trading securitization positions.

(7) As of December 31, 2022 and September 30, 2022, primarily includes 153 million and \$142 million of risk weighted assets arising from de minimis exposures, respectively, in addition to \$4,793 million and \$6,757 million primarily from incremental VaR and SVaR resulting from the inclusion of structural non-trading book foreign exchange and commodity exposures, respectively.

Total risk-weighted assets decreased from September 30, 2022 primarily due to lower market risk-weighted assets slightly offset by an increase in credit risk-weighted assets. The lower market risk-weighted assets were primarily due to

exposure changes, partially offset by changes in model inputs regarding volatility and the correlation between market risk factors. Credit risk-weighted assets were primarily attributable to increases in retail exposures driven

by card activities, equity exposures due to increase in market value of various investments, securitization exposures driven by new exposures and other exposures due to an increase in fixed assets partially offset by decreases in wholesale exposures mainly due to exposure decreases across FX and commodities.

Citi's credit, market and operational risk-weighted assets under the Basel III Advanced Approaches rules are derived, in part, from various internal models. These internal models

remain subject to ongoing review and approval by the FRB and the Office of the Comptroller of the Currency (OCC). Any modifications or requirements resulting from these ongoing reviews could result in changes in Citi's risk-weighted assets as calculated under the Basel III Advanced Approaches rules.

## Table 2: Risk-Based Capital Ratios

The following table presents Citigroup's capital components and ratios as of December 31, 2022:

<i>In millions of dollars, except ratios</i>	Required Capital Ratios <sup>(1)</sup>		December 31, 2022	
	Advanced Approaches	Standardized Approach	Advanced Approaches	Standardized Approach
CET1 Capital <sup>(2)</sup>			\$ 148,930	\$ 148,930
Tier 1 Capital			169,145	169,145
Total Capital <sup>(2)</sup>			188,889	197,578
Risk Weighted Assets			1,233,138	1,148,678
CET1 Capital Ratio <sup>(3)</sup>	10.0 %	11.5 %	12.08 %	12.97 %
Tier 1 Capital Ratio <sup>(3)</sup>	11.5	13.0	13.72	14.73
Total Capital Ratio <sup>(3)</sup>	13.5	15.0	15.32	17.20
Quarterly Adjusted Average Total Assets <sup>(2)(4)</sup>				2,395,863
Tier 1 Leverage Ratio <sup>(3)</sup>		4.0 %		7.06 %
Total Leverage Exposure <sup>(2)(5)</sup>			2,906,773	
Supplementary Leverage Ratio <sup>(3)</sup>	5.0 %		5.82 %	

The following tables present Citigroup's capital components and ratios under a hypothetical scenario where the full impact of Current Expected Credit Losses (CECL) is reflected as of December 31, 2022:

	December 31, 2022	
	Advanced Approaches	Standardized Approach
CET1 Capital Ratio	11.85 %	12.72 %
Tier 1 Capital Ratio	13.50	14.49
Total Capital Ratio	15.10	16.97
Tier 1 Leverage Ratio		6.94
Supplementary Leverage Ratio	5.71	

(1) Beginning October 1, 2022, Citi's required risk-based capital ratios included the 4.0% Stress Capital Buffer (SCB) and 3.0% global systemically important bank (GSIB) surcharge under the Standardized Approach, and the 2.5% Capital Conservation Buffer and 3.0% GSIB surcharge under the Advanced Approaches (all of which must be composed of CET1 Capital). Commencing January 1, 2023, Citi's GSIB surcharge increased from 3.0% to 3.5%, which is applicable to both the Standardized Approach and Advanced Approaches. See "Regulatory Capital Buffers" in Citi's 2022 Form 10-K.

(2) Citi's regulatory capital ratios and components reflect certain deferrals based on the modified regulatory capital transition provision related to the CECL standard. For additional information, see "Capital Resources—Regulatory Capital Treatment—Modified Transition of the Current Expected Credit Losses Methodology" in Citi's 2022 Form 10-K.

(3) Citi's binding CET1 Capital and Tier 1 Capital ratios were derived under the Basel III Standardized Approach, whereas Citi's binding Total Capital ratio was derived under the Basel III Advanced Approaches framework.

(4) Tier 1 Leverage ratio denominator. Represents quarterly average total assets less amounts deducted from Tier 1 Capital.

(5) Supplementary Leverage ratio denominator.

As indicated in the tables above, Citigroup's capital ratios at December 31, 2022 were in excess of the regulatory capital requirements under the U.S. Basel III rules. In addition, Citi was “well capitalized” under current federal bank regulatory agency definitions as of December 31, 2022. For further capital information related to Citigroup's insured depository institution subsidiaries, see “*Capital Resources*” in Citi’s 2022 Form 10-K and Schedule A of the Fourth Quarter 2022 FFIEC 101 Report for Citibank, N.A.

In addition, the Federal Reserve’s Total Loss Absorbing Capacity (TLAC) rule requires the U.S. GSIB top-tier holding companies, including the Firm, to maintain minimum levels of external TLAC and eligible long-term debt (LTD). For additional information, see “*Capital Resources*” in Citi’s 2022 Form 10-K.

## CAPITAL CONSERVATION AND COUNTERCYCLICAL CAPITAL BUFFERS

---

As of December 31, 2022, Citi's capital conservation buffer under the Standardized Approach was 8.5%, which was in excess of the current requirement applicable to Citi of 7.0% (comprised of the 4.0% Stress Capital buffer and 3.0% GSIB surcharge). As of December 31, 2022, Citi's capital conservation buffer under the Advanced Approaches was 7.3%, which was in excess of the current requirement applicable to Citi of 5.5% (comprised of the 2.5% Capital Conservation Buffer and 3.0% GSIB surcharge).

In August 2022, the FRB finalized and announced Citi's Stress Capital Buffer (SCB) requirement of 4.0% for the four-quarter window starting from October 1, 2022 to September 30, 2023. Accordingly, as of October 1, 2022, Citi is required to maintain an 11.5% required regulatory CET1 Capital ratio under the Standardized Approach, incorporating this SCB and its GSIB surcharge of 3.0%. Citi's required regulatory CET1 Capital ratio under the Advanced Approaches (using the fixed 2.5% Capital Conservation Buffer) remains unchanged at 10.0%.

In addition, commencing January 1, 2023, Citi's GSIB surcharge has increased from 3.0% to 3.5%, which is applicable to both the Standardized Approach and the Advanced Approaches, resulting in a required regulatory CET1 Capital ratio of 12.0% under the Standardized Approach and 10.5% under the Advanced Approaches, both as of such date. Furthermore, the Countercyclical Capital Buffer is currently set at 0% by the U.S. banking agencies. For additional information regarding the Capital Conservation Buffer, Stress Capital Buffer, Countercyclical Capital Buffer, and GSIB surcharge, see "*Capital Resources—Regulatory Capital Buffers*" in Citi's 2022 Form 10-K.

As of December 31, 2022, Citi's eligible retained income was \$6.5 billion, comprised of \$14.8 billion of net income (i.e., aggregate net income for the four calendar quarters ended December 31, 2022 as reported in Citi's FR Y-9C, "Consolidated Financial Statements for Holding Companies"), less applicable distributions of \$8.3 billion in the form of common share repurchases, as well as common and preferred stock dividends. In addition, Citi's capital ratios exceeded the regulatory capital requirements under the U.S. Basel III rules. Therefore, Citi is not subject to any payout limitations.

### Overview

For Citi, effective risk management is of primary importance to its overall operations. Accordingly, Citi has established an Enterprise Risk Management (ERM) Framework to ensure that all of Citi's risks are managed appropriately and consistently across the Company and at an aggregate, enterprise-wide level. Citi's culture drives a strong risk and control environment, and is at the heart of the ERM Framework, underpinning the way Citi conducts business. The activities that Citi engages in, and the risks those activities generate, must be consistent with Citi's Mission and Value Proposition and the key Leadership Principles that support it, as well as Citi's risk appetite.

Under Citi's Mission and Value Proposition, which was developed by its senior leadership and distributed throughout the Company, Citi strives to serve its clients as a trusted partner by responsibly providing financial services that enable growth and economic progress while earning and maintaining the public's trust by constantly adhering to the highest ethical standards. As such, Citi asks all colleagues to ensure that their decisions pass three tests: they are in Citi's clients' best interests, create economic value and are always systemically responsible.

Citi has designed Leadership Principles that represent the qualities, behaviors and expectations all employees must exhibit to deliver on Citi's mission of enabling growth and economic progress. The Leadership Principles inform Citi's ERM Framework and will contribute to creating a culture that drives client, control and operational excellence. Citi colleagues share a common responsibility to uphold these leadership principles and hold themselves to the highest standards of ethics and professional behavior in dealing with Citi's clients, business colleagues, shareholders, communities and each other.

Citi's ERM Framework details the principles used to support effective enterprise-wide risk management across the end-to-end risk management lifecycle. The ERM Framework covers the risk management roles and responsibilities of the Citigroup Board of Directors (the Board), Citi's Executive Management Team and employees across the lines of defense. The underlying pillars of the framework encompass:

*Culture* - the core principles and behaviors that underpin a strong culture of risk awareness, in line with Citi's Mission and Value Proposition, and Leadership Principles;

*Governance* - the committee structure and reporting arrangements that support the appropriate oversight of risk management activities at the Board and Executive Management Team levels;

*Risk Management* - the end-to-end risk management cycle including the identification, measurement, monitoring, controlling and reporting of all risks including top, material, growing, idiosyncratic and emerging risks, and aggregated to an enterprise-wide level; and

*Enterprise Programs* - the key risk management programs performed across the risk management lifecycle for all risk categories; these programs also outline the specific roles played by each of the lines of defense in these processes.

Each of these pillars is underpinned by supporting capabilities, which are the infrastructure, people, technology and data and modelling and analytical capabilities that are in place to enable the execution of the ERM Framework.

Citi's approach to risk management requires that its risk-taking be consistent with its risk appetite. The risk appetite is the aggregate level and types of risk Citi is willing to take or tolerate in order to meet its strategic objectives and business plan. Citi's risk appetite framework is the overall firm-wide approach, including policies, processes, controls and systems through which the risk appetite is established, communicated and monitored. In addition, underlying risk limits and thresholds are designed to control concentrations and operationalize risk appetite.

Citi uses a lines of defense model as a key component of its ERM Framework to manage its risks. As discussed below, the lines of defense model brings together risk-taking, risk oversight, and risk assurance under one umbrella and provides an avenue for risk accountability of first line of defense, a construct for effective challenge by the second line of defense (Independent Risk Management and Independent Compliance Risk Management), and empowers independent risk assurance by the third line of defense (Internal Audit). In addition, the lines of defense model includes organizational units tasked with supporting a strong control environment ("enterprise support functions"). The first, second, and third lines of defense, along with enterprise support functions, have distinct roles and responsibilities and are empowered to perform relevant risk management processes and responsibilities in order to manage Citi's risks in a consistent and effective manner.

#### *First Line of Defense: Front Line Units and Front Line Unit Activities*

Citi's first line of defense owns the risks and associated controls inherent in, or arising from, the execution of its business activities and is responsible for identifying, measuring, monitoring, controlling and reporting those risks consistent with Citi's strategy, Mission and Value Proposition, Leadership Principles and risk appetite.

Front line units are responsible and held accountable for managing the risks associated with their activities within the boundaries set by independent risk management. They are also responsible for designing and implementing effective internal controls and maintaining processes for managing their risk profile, including through risk mitigation, so that it remains consistent with Citi's established risk appetite.

Front line unit activities are considered part of the first line of defense and are subject to the oversight and challenge of independent risk management.

The first line of defense is composed of Citi's Business Management, Regional Management, certain Corporate Functions (Enterprise Operations and Technology, Chief Administrative Office, Global Public Affairs, Office of the Citibank Chief Executive Officer (CEO) and Finance), as well as other front line unit activities. Front line units may also include enterprise support units and/or conduct enterprise support activities - see "Enterprise Support Functions" below.

### *Second Line of Defense: Independent Risk Management*

Independent risk management units are independent of the first line of defense. They are responsible for overseeing the risk-taking activities of the first line of defense and challenging the first line of defense in the execution of its risk management responsibilities. They are also responsible for independently identifying, measuring, monitoring, controlling and reporting aggregate risks and for setting standards for the management and oversight of risk. Independent risk management is composed of Independent Risk Management (IRM) and Independent Compliance Risk Management (ICRM), which are led by the Group Chief Risk Officer (CRO) and Group Chief Compliance Officer (CCO) who have unrestricted access to the Board and its Risk Management Committee to facilitate the ability to execute their specific responsibilities pertaining to escalation to the Board.

### *Third Line of Defense: Internal Audit*

Internal Audit is independent of the first line, second line and enterprise support functions. The role of Internal Audit is to provide independent, objective, reliable, valued and timely assurance to the Board, its Audit Committee, Citi senior management and regulators over the effectiveness of governance, risk management and controls that mitigate current and evolving risks and enhance the control culture within Citi. The Citi Chief Auditor manages Internal Audit and reports functionally to the Chairman of the Citi Audit Committee and administratively to the Citi Chief Executive Officer. The Citi Chief Auditor has unrestricted access to the Board and the Board Audit Committee to address risks and issues identified through Internal Audit's activities.

### *Enterprise Support Functions*

Enterprise support functions engage in activities that support safety and soundness across Citi. These functions provide advisory services and/or design, implement, maintain and oversee Company-wide programs that support Citi in maintaining an effective control environment.

Enterprise support functions are composed of Human Resources and Legal (including Citi Security and Investigative Services). Front line units may also include enterprise support units and/or conduct enterprise support activities (e.g., the Controllers Group within Finance).

Enterprise support functions, units and activities are subject to the relevant Company-wide independent oversight processes specific to the risks for which they are accountable (e.g., operational risk, compliance risk, reputation risk).

For more information see “*Managing Global Risk – Overview*” in Citi's 2022 Form 10-K.

### **Scope and Nature of Credit Risk Reporting and Measurement Systems**

Citi uses a global risk exposure warehouse and monitoring system to manage, monitor and report credit exposure to its wholesale obligors and counterparties. Retail exposures are booked in local systems specific to local credit risk regulations. However all retail exposures and performance information are captured and reported centrally at the portfolio level for monitoring and managing the risks.

## CREDIT RISK: GENERAL DISCLOSURES

---

### **Credit Risk Management**

Credit risk is the risk of loss resulting from the decline in credit quality or the failure of a borrower, counterparty, third party or issuer to honor its financial or contractual obligations. Credit risk arises in many of Citi's business activities, including: consumer, commercial and corporate lending; capital markets derivative transactions; structured finance; securities financing transactions (repurchase and reverse repurchase agreements, securities loaned and borrowed); and settlement and clearing activities.

### **Corporate Credit Risk**

For corporate clients and investment banking activities across Citi, the credit process is grounded in a series of fundamental policies, including:

- joint business and independent risk management responsibility for managing credit risks, where independent risk provides credible review and challenge to first line units;
- a single center of control for each credit relationship, which coordinates credit activities with each client;
- portfolio limits to ensure diversification and maintain risk/capital alignment;
- a minimum of two authorized credit officer signatures required on most extensions of credit;
- risk rating standards, applicable to every obligor and facility; and
- consistent standards for minimum credit origination documentation and remedial management.

### **Consumer Credit Risk**

For consumer credit, independent credit risk management is responsible for establishing the Global Consumer Credit Risk Policies, while both business and independent risk are jointly responsible for approving business-specific policies and procedures, monitoring business risk management performance, providing ongoing assessment of portfolio credit risk, ensuring the appropriate level of allowance for credit losses and approving new products and new risks.

### **Past Due and Impaired Exposures**

For Citi's significant accounting policies regarding past due and impaired loans, see Note 1, "*Summary of Significant Accounting Policies*" and Note 14, "*Loans*" in the Notes to Consolidated Financial Statements in Citi's 2022 Form 10-K.

For information on Citi's significant accounting policies and estimates regarding impaired securities, including the

determination of other-than-temporary impairment, see "*Significant Accounting Policies and Significant Estimates—Valuations of Financial Instruments*" and Note 13, "*Investments*" in the Notes to Consolidated Financial Statements in Citi's 2022 Form 10-K.

### **Allowance for Credit Losses**

For a description of Citi's significant accounting policies and estimates regarding the allowance for credit losses, including policies for charging-off accounts deemed uncollectible, see "*Significant Accounting Policies and Significant Estimates—Citi's Allowance for Credit Losses (ACL)*" and Note 1, "*Summary of Significant Accounting Policies*" in the Notes to Consolidated Financial Statements in Citi's 2022 Form 10-K.

## Credit Risk Exposures

The following table presents the geographic distribution of Citi's major credit risk exposures as of December 31, 2022.

**Table 3: Principal Credit Risk Exposures by Geographic Region<sup>(1)(2)(3)</sup>**

<i>In millions of dollars</i>	December 31, 2022				
	North America	EMEA	Latin America	Asia	Total
<b>On-Balance Sheet Exposures</b>					
Cash and Due From Banks (Including Segregated Cash and Other Deposits)	\$ 7,024	\$ 9,892	\$ 5,516	\$ 8,145	\$ 30,577
Deposits With Banks	230,753	18,575	8,507	53,613	311,448
Federal Funds Sold and Securities Borrowed or Purchased Under Agreements to Resell	181,005	137,193	4,986	42,217	365,401
Brokerage Receivables	32,468	16,122	2,251	3,351	54,192
Debt Securities	364,747	36,818	45,858	71,119	518,542
Loans Held-for-Investment, Net of Unearned Income <sup>(4)</sup>	416,792	83,071	51,090	106,268	657,221
<b>Off-Balance Sheet Exposures</b>					
<b>Guarantees<sup>(5)</sup></b>					
Financial Standby Letters of Credit	\$ 62,947	\$ 19,924	\$ 1,214	\$ 5,560	\$ 89,645
Performance Guarantees	2,780	3,345	1,854	3,717	11,696
Securities Lending Indemnifications	80,809	14,964	—	163	95,936
<b>Credit Commitments and Lines of Credit</b>					
Commercial and Similar Letters of Credit	660	2,545	110	2,001	5,316
One- to Four-Family Residential Mortgages	917	—	—	1,477	2,394
Revolving Open-End Loans Secured by One- to Four-Family Residential Properties	5,719	—	—	661	6,380
Commercial Real Estate, Construction and Land Development	13,385	1,104	196	485	15,170
Credit Card Lines	607,805	5,680	16,102	53,645	683,232
Commercial and Other Consumer Loan Commitments	193,763	76,745	9,012	17,879	297,399

(1) Credit risk exposures are presented on a U.S. GAAP basis and in the geographic region in which each exposure is managed, rather than the geographic region in which the obligor is domiciled.

(2) *North America* includes the U.S., Canada and Puerto Rico; *EMEA* represents Europe, Middle East and Africa; *Latin America* includes Mexico; and *Asia* includes Japan.

(3) Excludes net derivative receivables for which the geographic distribution is not readily available. As of December 31, 2022 Citi's net derivative receivables classified as trading account assets amounted to \$75,306 million.

(4) As of December 31, 2022 loans held-for-investment were net of (\$85) million of unearned income.

(5) Represents the maximum potential amount of future payments.

**Table 4: Details on Impaired Loans, Allowance for Loan Losses, and Actual Credit Losses**

The following table presents Citi's impaired loans, past due loans, and allowance for loan losses by counterparty for wholesale exposures and subcategories for retail exposures on a U.S. GAAP basis as of December 31, 2022:

December 31, 2022									
Wholesale Exposures					Retail Exposures				
<i>In millions of dollars</i>	Financial Institutions	Commercial & Industrial	Other	Subtotal	Residential Mortgages and Real Estate Loans	Credit Cards	Other	Subtotal	Total
<b>Impaired Loans:</b>									
Impaired Loans With a Related Allowance	\$ 149	\$ 583	\$ 33	\$ 765	\$ 1,334	\$ 1,255	\$ 107	\$ 2,696	\$ 3,461
Impaired Loans Without a Related Allowance	3	277	77	357	225	—	—	225	582
<b>Total Impaired Loans</b>	<b>152</b>	<b>860</b>	<b>110</b>	<b>1,122</b>	<b>1,559</b>	<b>1,255</b>	<b>107</b>	<b>2,921</b>	<b>\$ 4,043</b>
Loans Past Due 90 Days And On Nonaccrual <sup>(1)(2)</sup>	152	860	110	1,122	560	93	21	674	1,796
Loans Past Due 90 Days And Still Accruing	102	594	31	727	176	1,471	11	1,658	2,385
<b>Allowance for Loan Losses:</b>									
Attributable to Collectively Evaluated Impaired Loans	255	1,992	285	2,532	683	11,636	1,202	13,521	16,053
Attributable to Individually Evaluated Impaired Loans	52	258	13	323	110	479	7	596	919
Attributable to Purchased Credit-Impaired Loans	—	—	—	—	2	—	—	2	2
<b>Total Allowance For Loan Losses</b>	<b>\$ 307</b>	<b>\$ 2,250</b>	<b>\$ 298</b>	<b>\$ 2,855</b>	<b>\$ 795</b>	<b>\$ 12,115</b>	<b>\$ 1,209</b>	<b>\$ 14,119</b>	<b>\$ 16,974</b>

(1) Consists of residential first mortgages that are guaranteed by U.S. government-sponsored agencies that is 90 days or more past due of \$0.2 billion.

(2) For Wholesale exposures non-accrual loans generally include those loans that are 90 days or more past due or those loans for which Citi believes, based on actual experience and a forward looking assessment of the collectability of the loan in full, that the payment of interest and/or principal is doubtful.

The following table presents Citi's charge-offs by counterparty for wholesale exposures and subcategories for retail exposures on a U.S. GAAP basis as of December 31, 2022:

**Three Months Ended December 31, 2022**

<i>In millions of dollars</i>	<b>Wholesale Exposures</b>				<b>Retail Exposures</b>				<b>Total</b>
	<b>Financial Institutions</b>	<b>Commercial &amp; Industrial</b>	<b>Other</b>	<b>Subtotal</b>	<b>Residential Mortgages</b>	<b>Credit Cards</b>	<b>Other</b>	<b>Subtotal</b>	
Charge-offs	\$ 39	\$ 54	\$ 37	\$ 130	\$ —	\$ 1,115	\$ 222	\$ 1,337	\$ 1,467

The following table presents Citi's major credit risk exposures by counterparty for wholesale exposures and subcategories for retail exposures as of December 31, 2022:

**Table 5: Principal Credit Risk Exposures by Wholesale Exposure Counterparty and Retail Exposure Subcategory<sup>(1)(2)</sup>**

<i>In millions of dollars</i>	December 31, 2022					December 31, 2022			Total

<b>Off-Balance Sheet Exposures</b>									
<b>Guarantees<sup>(10)</sup></b>									
Financial Standby Letters of Credit	\$ 1,776	\$ 87,760	\$ 109	\$ —	\$ —	\$ —	\$ —	\$ —	\$ 89,645
Performance Guarantees	777	10,911	8	—	—	—	—	—	11,696
Securities Lending Indemnifications	76,471	19,465	—	—	—	—	—	—	95,936
<b>Credit Commitments and Lines of Credit</b>									
Commercial and Similar Letters of Credit	1,443	3,803	70	—	—	—	—	—	5,316
One- to Four-Family Residential Mortgages	—	11	—	—	—	1,163	—	1,220	2,394
Revolving Open-End Loans Secured by One- to Four-Family Residential Properties	—	—	—	—	—	6,379	—	1	6,380
Commercial Real Estate, Construction and Land Development	—	15,125	—	—	—	45	—	—	15,170
Credit Card Lines <sup>(11)</sup>	29	24,694	2,052	—	—	—	633,272	23,185	683,232
Commercial and Other Consumer Loan Commitments	2,050	268,761	623	14,845	—	727	7,477	2,916	297,399

(1) Credit risk exposures are presented on a U.S. GAAP basis.

(2) Securitization exposures are reflected within wholesale exposure counterparties and retail exposure subcategories, as appropriate, based upon the nature of the underlying securitized assets or party on which credit risk is assumed.

(3) Corporate credit risk exposures include non-depository financial institutions, bank holding companies, insurance companies and non-central government public sector entities, consistent with FFIEC 101 reporting requirements.

(4) Represents the netting of receivable and payable balances with the same counterparty under enforceable netting agreements and, with respect to derivatives receivables, also the netting of cash collateral paid and received by counterparty under enforceable credit support agreements. For additional information regarding enforceable netting agreements and credit support agreements, see Note 11, "Securities Borrowed, Loaned and Subject to Repurchase Agreements" and Note 23, "Derivatives" in the Notes to Consolidated Financial Statements in Citi's 2022 Form 10-K.

(5) Other represents \$8,617 million of currency and coin, as well as cash items in process of collection.

(6) Other includes exchange traded and cleared derivatives receivables. Cleared derivatives include derivatives executed bilaterally with a counterparty in the OTC market but then novated to a central clearing house, whereby the central clearing house becomes the counterparty to both of the original counterparties. Exchange traded derivatives include derivatives executed directly on an organized exchange that provides pre-trade price transparency.

(7) As of December 31, 2022 loans held-for-investment were net of (\$85) million of unearned income.

- (8) Classifiably-managed (individually risk rated) consumer loans are considered wholesale exposures in accordance with the U.S. Basel III rules.
- (9) Certain wholesale or commercial credit risk exposures less than or equal to \$1 million are considered retail exposures in accordance with the U.S. Basel III rules.
- (10) Represents the maximum potential amount of future payments.
- (11) Credit card lines extended to wholesale counterparties for use by their employees are considered wholesale exposures in accordance with the U.S. Basel III rules.

The following table presents the remaining contractual maturity of Citi's principal credit risk exposures as of December 31, 2022.

**Table 5.1: Credit Risk Exposures by Remaining Contractual Maturity<sup>(1)(2)</sup>**

<i>In millions of dollars</i>	<b>December 31, 2022</b>		
	<b>1 year or less</b>	<b>Over 1 year</b>	<b>Total</b>
<b>On-Balance Sheet Exposures</b>

Commercial Real Estate, Construction and Land Development	2,198	12,972	15,170
Credit Card Lines	682,175	1,057	683,232
Commercial and Other Consumer Loan Commitments	74,247	223,152	297,399

- (1) Credit risk exposures are presented on a U.S. GAAP basis.
- (2) Securitization exposures are reflected within wholesale exposure counterparties and retail exposure subcategories, as appropriate, based upon the nature of the underlying securitized assets or party on which credit risk is assumed.
- (3) Represents the maximum potential amount of future payments.

The following table presents average balances for Citi's major off-balance sheet credit risk exposures for the three months ended December 31, 2022. For average balances of Citi's major on-balance sheet credit risk exposures for the three months ended December 31, 2022, see "Average Balances and Interest Rates - Assets" in Citi's 2022 Form 10-K.

**Table 5.2: Average Balances of Principal Off-Balance Sheet Credit Risk Exposures<sup>(1)</sup>**

<i>In millions of dollars</i>	<b>Three Months Ended December 31, 2022</b>
<b>Guarantees<sup>(2)</sup></b>	
Financial Standby Letters of Credit	\$ 88,802
Performance Guarantees	11,545
Securities Lending Indemnifications	103,667
<b>Credit Commitments and Lines of Credit</b>	
Commercial and Similar Letters of Credit	5,486
One- to Four-Family Residential Mortgages	2,541
Revolving Open-End Loans Secured by One- to Four-Family Residential Properties	6,375
Commercial Real Estate, Construction and Land Development	15,342
Credit Card Lines	686,643
Commercial and Other Consumer Loan Commitments	294,400

(1) Average balances are calculated using the month-end balances for each of the three months from September 30, 2022 to December 31, 2022.

(2) Represents the maximum potential amount of future payments.

See the following references to Citi's 2022 Form 10-K for additional quantitative information regarding credit risk exposures, all of which are presented in accordance with U.S. GAAP.

#### *Corporate and Consumer Loans*

- See Note 14, "*Loans*" for additional information on loans outstanding by counterparty type and geographic region, non-accrual and delinquent loans, and impaired loans.
- See "*Managing Global Risk—Credit Risk*" for additional information on loans outstanding by counterparty type, geographic region, remaining contractual maturity, non-accrual and delinquent loans, and impaired loans.

#### *Investment Securities*

- See Note 13, "*Investments*" for information on investment securities by issuer type, remaining contractual maturity and investment securities determined to be other-than-temporarily impaired.

#### *Repo-Style Transactions, Eligible Margin Loans and OTC Derivative Contracts*

- See Note 11, "*Securities Borrowed, Loaned and Subject to Repurchase Agreements*" for respective carrying values.
- See Note 23, "*Derivatives*" for derivative notional amounts, gross mark-to-market receivables/payables, collateral netting benefits and net mark-to-market receivables/payables, as well as credit derivative notional amounts and gross mark-to-market receivables/payables by counterparty type and remaining contractual maturity.

#### *Off-Balance Sheet Exposures*

- See Note 27, "*Pledged Assets, Restricted Cash, Collateral, Guarantees and Commitments*" for information on the maximum potential amount of future payments under guarantees, and credit commitments by type of product for information on the maximum potential amount of future payments under guarantees, credit commitments by type of product and lease commitments.

#### *Allowance for Credit Losses*

- See "*Managing Global Risk—Credit Risk—Details of Credit Loss Experience*" for a reconciliation of changes in the allowance for credit losses.
- See Note 15, "*Allowance for Credit Losses*" for a disaggregation of the allowance for credit losses by impairment method.

### Overview

Under the U.S. Basel III rules, Citi is required to categorize its credit risk, in part, into wholesale, retail, securitization, central counterparty, and equity exposures. Each category may cross multiple business segments as presented in Citi's other reports, such as its Forms 10-K and 10-Q.

Wholesale exposures are classifiable-managed (individually risk rated) and retail exposures are delinquency-managed (portfolio based). Wholesale exposures primarily reside within the *ICG* businesses and Citi Private Bank, as well as Corporate Treasury. Additionally, classifiable-managed exposures reside within certain commercial business lines in *PBWM* and *Corporate/Other*. Wholesale exposures generally include deposits with banks, debt securities available-for-sale or held-to-maturity, loans, and off-balance sheet exposures such as unused commitments to lend and letters of credit.

Wholesale exposures, which include counterparty credit risk exposures arising from OTC derivative contracts, repo-style transactions and eligible margin loans, consist of exposures such as those to corporates, banks, securities firms, financial institutions, central governments, government agencies, local governments, other public sector entities, income producing real estate, high volatility commercial real estate, high net worth individuals not eligible for retail exposure treatment, and other obligor/counterparty types not included in retail exposures.

Retail exposures primarily reside within consumer business lines in *PBWM* and *Corporate/Other*. Additionally, certain delinquency-managed exposures for business purposes that are less than or equal to \$1 million, as well as certain delinquency-managed exposures to individuals for non-business purposes, that are part of the *ICG* businesses and Citi Private Bank are treated as retail exposures in accordance with the U.S. Basel III rules. Retail exposures generally include loans and off-balance sheet commitments to lend. Retail exposures consist of three subcategories: residential mortgage exposures, qualifying revolving exposures, and other retail exposures. Residential mortgage exposures include one- to four-family residential mortgages, both first lien and second lien, as well as home equity lines of credit. Qualifying revolving exposures include credit card and charge card products where the overall credit limit is less than or equal to \$100,000, and overdraft lines on individual checking accounts. Other retail exposures include credit card products above the \$100,000 threshold, personal loans, student loans, and commercial delinquency-managed exposures less than or equal to \$1 million.

### Wholesale Credit Risk Management

#### *Wholesale Credit Risk Exposures*

As previously noted, Citi's wholesale credit risk exposures are to corporate, commercial, public sector and high-net worth clients around the world with a range of wholesale banking products and services. Citi's wholesale businesses that incur credit, market, operational and franchise risk are covered by a risk management

framework which sets forth core risk principles, implemented through policies that define limits, definitions, rules, and standards for identifying, measuring, approving, and reporting risk, including business conducted in majority-owned, management-controlled entities.

Obligors are assigned a risk rating through a risk rating process governed by the Citi Risk Rating Policy. Facilities to an obligor are approved in accordance with Citi level and business level risk policies. The risk policies require a comprehensive analysis of each obligor and all proposed credit exposures to that obligor, on at least an annual basis.

Wholesale Credit Risk periodically reviews exposures to ensure compliance with various limit and concentration constructs. Quarterly reviews are conducted of certain high risk exposures in the *ICG*.

#### *Use of Risk Parameter Estimates Other Than for Regulatory Capital Purposes*

For Citi's wholesale exposures, internal credit ratings are used in determining approval levels, concentration limits, economic risk capital, and reserves, in addition to regulatory capital and capital adequacy. Each wholesale obligor is assigned an obligor risk rating (ORR) that reflects the one-year probability of default (PD) of the obligor. Each wholesale facility is assigned a facility risk rating (FRR) that reflects the expected loss rate of the facility, the product of the one-year PD and the expected loss given default (LGD) associated with the facility characteristics.

ORRs are established through an integrated framework that combines quantitative and qualitative tools, calibrated and tested across economic cycles, with risk manager expertise on customers, markets and industries. ORRs are generally expected to change in line with material changes in the PD of the obligor. Rating categories are defined consistently across wholesale credit by ranges of PDs and are used to calibrate and objectively test rating models and the final ratings assigned to individual obligors.

Independently validated models establish the starting point in the internal obligor rating process.

Internal rating models include statistically derived models and expert judgment risk rating models. These models are developed primarily by an independent analytical team in conjunction with independent risk management. The analytical team resides in Credit and Obligor Risk Analytics (CORA) which is part of the corporate-level independent group within Citi's overall risk management organization. The statistical rating models cover Citi's corporate and commercial bank segment and certain commercial activity within the consumer business lines, and are based on statistically-significant financial variables. Expert judgment rating models cover industry or obligor segments where there are limited defaults or data histories, or highly specialized or heterogeneous populations.

To the extent that risk management believes the applicable model does not capture all the relevant factors affecting the credit risk of an obligor, discretionary adjustments may be applied to derive the final ORR, within limits defined by policy. For larger

corporates, commercial banks and commercial real estate, the final ORRs are derived through the use of a scorecard that is designed to capture the key risks for the segment. For larger credit relationships, the final ORRs are the starting point for deriving a longer term view on the credit rating that is used as the basis for obligor limits and approval levels.

### ***Use of Credit Risk Mitigation***

Risk mitigation may depend on the type of product. For counterparty credit risk, counterparties may be required to post cash or securities margin based upon the terms of the Credit Support Annex with that counterparty. Margin posted by a counterparty is reflected as a reduction of exposure at the netting set level, subject to obtaining an enforceable legal opinion regarding the certainty of the netting and margin agreement. For lending based transactions, the primary risk mitigants are guarantees or other types of support from third parties or related entities, as well as collateral such as cash, securities, real estate, or other asset types. Additionally, exposure can be mitigated through the purchase of credit default swaps. The risk policies define specific documentation requirements for all product contracts, and specific requirements for a guarantee to qualify as “full support” which align with the guarantee eligibility requirements under the U.S. Basel III rules.

### ***Recognizing Credit Risk Mitigation***

For purposes of calculating regulatory capital for counterparty credit risk, margin posted by a counterparty is reflected as a reduction of exposure at default (EAD) in accordance with the U.S. Basel III rules, subject to obtaining an enforceable legal opinion regarding the certainty of the netting and margin agreement. For purposes of calculating Basel III regulatory capital for lending products, collateral is recognized in the LGD based on the related collateral type. The benefit of Basel-eligible guarantees is captured through PD substitution in regulatory capital.

## **Retail Credit Risk Management**

### ***Policies and Processes for Retail Credit Risk Management***

Citi extends retail credit on the basis of the customer’s willingness and ability to repay, our stated risk appetite, and underwriting guidelines, rather than placing primary reliance on credit risk mitigation. Depending on a customer’s standing and the type of product, facilities may be provided on an unsecured basis.

Citi’s retail banking operations use credit models in assessing and managing risk in their businesses and, as a result, models play an integral role in customer approval and management processes. Models used include PD models, primarily in the form of custom application scorecards, custom behavioral scorecards, and generic bureau scores, for example a FICO score.

Application scorecards are derived from the historically observed performance of new customers. They are derived using customer demographic and financial information, including data available through credit bureaus. Through statistical techniques, the relationship between these variables and the credit performance is quantified to produce output scores reflecting a PD. These scores are used primarily for decision-making

regarding new customers and may reflect different default definitions than those required by the U.S. Basel III rules. These scores may be used as segmentation variables in the Basel model.

Behavioral scorecards are derived from the historically observed performance of existing customers (including bureau data). They can be based upon internal information, credit bureau information, or both. The techniques used to derive the output scores reflecting certain PDs are very similar to those used for application scoring. The output scores are used for existing customer management activities. These scores may be used as segmentation variables in the Basel model.

Citi also employs credit loss forecasting models for the purpose of projecting credit losses in various economic scenarios, including CCAR, DFAST, and internal capital adequacy assessment process (ICAAP) stress loss scenarios, informing portfolio risk appetite, and estimating required allowance for credit losses. Such models are developed utilizing a variety of statistical and business analytics methodologies. They include portfolio/product, segment, and/or account level models driven by historical industry data, historical internal portfolio performance, and/or econometric indicators. Such models are not utilized in underwriting, although they may be used to inform risk appetite, or the Basel III Advanced Approaches framework.

Citi’s retail credit risk custom models are primarily internally derived, although external vendors may be contracted to build models on behalf of the businesses. All such external models (including generic scores) are subject to internal independent validation by Citi’s Model Risk Management function.

### ***Collateral Valuation and Management***

In Citi’s residential mortgage businesses, Citi’s credit policy requires annual assessment of portfolio loan to value, with individual loans valued more frequently as necessary. A variety of methods, ranging from the use of market indices to individual professional inspection, may be used. For margin and security backed loans, Citi’s credit policy generally requires that collateral valuations be performed daily.

### ***Types of Collateral***

In Citi’s residential real estate businesses, a mortgage of the property is obtained to secure claims. Physical collateral is also typically obtained in vehicle financing in most jurisdictions. Loans to private banking or investment management clients may be made against the pledge of eligible marketable securities, cash or real estate.

### ***Calculation of Risk-Weighted Assets Using Internal Parameters***

In accordance with the requirements of the U.S. Basel III rules, Citi applies the Advanced Internal Ratings Based (A-IRB) approach for credit risk. Under the A-IRB approach, Citi uses internal estimates of PD, LGD and credit conversion factors (CCF) as risk parameter inputs to the Basel III supervisory formulas used for the risk-weighted asset calculations applied to various types of wholesale, counterparty, and retail credit risk exposures.

### ***Wholesale Credit Risk***

PD, LGD and CCF (Credit Conversion Factor) used for EAD are reviewed and re-estimated on an annual basis and updated as needed. PD is an estimate of the long-run average one-year default rate for each rating category, adjusted to ensure increasing default rates along the rating scale. PDs, LGDs and CCFs are based on internal data as of 2000 onward.

LGD represents the economic loss associated with defaults occurring in a downturn period (or the long-run average, whichever is higher). The economic loss is measured as the present value of the cash flows, post default, and includes costs associated with the work out, such as legal costs. Adjustments are also made for accrued interest and fees and unresolved defaults. Downturn periods are determined in accordance with the U.S. Basel III rules and reflect periods of significantly higher internal default rates by jurisdiction. LGD is segmented by key drivers of losses, such as product type, collateral type and coverage, seniority, jurisdiction, and/or obligor segment (such as large corporates, financial institutions, sovereigns, SMEs or private banking clients). With some exceptions, such as bonds and sovereign LGDs, where external information is sourced to supplement internal data, LGDs are based on Citi's internal data for defaults resolving as of 2000 onward.

The EAD for each facility is equal to 100% of the on-balance sheet (direct) exposure, plus the exposure arising from any expected drawdown of an off-balance sheet (indirect) unused commitment or contingency. The percentage of the drawdown amount is referred to as the CCF. CCFs for unused commitments are calculated using regression models on internal data. The key drivers for the models include factors such as product type, current usage, obligor segment, credit quality and/or jurisdiction. Average CCFs based on internal data are used for trade letters of credit and performance standby letters of credit, while a fixed 100% CCF value is applied to financial standby letters of credit and other types of contingent credit. CCFs include adjustments for downturn periods, consistent with those used for LGD, and accrued but unpaid interest and fees at the time of default.

Maturity for loans and leases is based on remaining contractual maturity. Maturity is capped at five years and with a floor of one year, except as permitted by the U.S. Basel III rules.

### ***Retail Credit Risk***

The estimates for PD, LGD and CCFs for retail credit exposures are generally updated on quarterly basis using internal data covering a range of economic conditions and are defined similarly to those for wholesale credit. As required by the U.S. Basel III rules, PD is an estimate of the one-year default rate based on the long-term averages. The LGD is an estimate of the economic loss that is associated with the defaulted exposures and any risk mitigants, such as insurance and/or collateral, if applicable. CCF is an estimate of the percentage of an undrawn credit line that will be drawn down within a one-year period. The EAD is estimated as a sum of 100% of the drawn exposure at the beginning of this year and the expected portion of undrawn exposure (as of the beginning of the year) corresponding to CCF.

The long-run average CCFs and LGDs are subject to certain adjustments, including an adjustment to reflect the averages associated with downturn periods. The downturn periods are identified based on internal default rates by major product

category and country (similar to the approach used for wholesale credit risk exposures) in accordance with the U.S. Basel III rules.

All Basel III retail parameters are calculated for homogeneous segments of credit exposures delineated by risk drivers, such as consumer credit score band, loan to value ratio, credit line utilization, months-on-book and delinquency aging. Segments are defined by specific product characteristics within a portfolio. The credit scores used are generic bureau scores (for example, a FICO score) or internally developed scoring models, which are subject to Citi's Model Risk Management Policy, as discussed further below.

Generally, the approach to estimating PD, LGD, and CCF is consistent across all retail exposure subcategories—residential mortgage exposures, qualifying revolving exposures, and other retail exposures.

### **Credit Rating and Basel Parameter Governance**

The Citi Risk Rating Policy requires that all wholesale businesses have an approved risk rating process for deriving risk ratings for all obligors and facilities. Establishing the risk rating process is the responsibility of the independent risk manager aligned with each business. The process must be approved by a risk manager who has the highest senior credit officer designation, and the head of CORA. It is the responsibility of the risk manager to ensure that the process remains appropriate for the business' activities. The risk rating process must be re-approved at least once every three years, unless more frequent review is specified as a condition of the approval or an extension is approved per the risk rating process approval and control standards. All ratings must be reviewed annually, at a minimum.

Risk and the business share responsibility for the accuracy of risk ratings. Fundamental Credit Review (FCR) reviews the appropriateness of the risk ratings. FCR may change an existing risk rating during a review or during ongoing business monitoring, and has final authority. Recognition of loss mitigation in the FRRs for collateral or support requires that the mitigant and the reporting comply with the collateral and support policies. In addition, the accuracy of ratings is tested on an annual basis and at various levels. The ORR validation, as well as the rating model testing, is reviewed by senior credit risk managers. Various levels of backtesting, benchmarking and validation cover all models and methodologies used in the assignment of ratings, as well as the models used to calculate Basel parameters.

The estimation of Basel parameters is governed under parameter control standards for wholesale and retail credit exposures. All models used to estimate Basel parameters must comply with Citi's Model Risk Management Policy, including the requirement to be validated by an independent model validation unit and approved by senior risk management.

### **Model Risk Management Policy**

Model risk refers to the potential adverse impact to Citi from using a model arising from model errors or from incorrect or inappropriate use of the model output.

Citi's Model Risk Management Policy is designed to comply with supervisory guidance on model risk management and is approved by each of Citigroup's and Citibank's Chief Risk Officer and Citi's Board of Directors. This policy establishes a model risk management framework designed to ensure consistent

standards across Citi for identifying model risk, assessing its magnitude, and managing the risks that arise when using models.

Citi's Head of Model Risk Management is responsible for and owns this policy. The Citi Model Risk Management Committee oversees Citi's Model Risk Management Framework, monitoring its effectiveness and associated risks.

### Independent Validation of Models

Models for wholesale credit risk and retail credit risk are independently validated by Model Risk Management and approved for use. Generally, Citi's model validation process involves evaluation of conceptual soundness including key assumptions, effective challenge of the model design and construction, identification of model limitations and incremental analysis and testing as necessary. In addition, models for wholesale credit risk and retail credit risk are subject to periodic model risk assessment, ongoing performance monitoring, outcomes analysis, annual model review, ongoing model validation, and model change management as required under the Citi Model Risk Management Policy. Wholesale credit rating

models and Basel parameter models (for both wholesale and retail) are integrated into internal risk systems by business, Risk and information technology. The definition of default for wholesale and retail credit risk conforms with the applicable definitions in the U.S. Basel III rules.

Internal audit is responsible for independently assessing the adequacy and effectiveness of the overall model risk management framework and implementation (including risk rating processes).

### Basel Parameters by Exposure Type

Tables 6 through 10 below present Citi's wholesale, counterparty credit risk, and retail portfolios of exposures by the key Basel parameters (PD, LGD, CCF). These parameters are inputs to the Basel III supervisory formulas to calculate credit risk-weighted assets. These tables do not include securitization, central counterparty or equity exposures. The presentation is consistent as to categories, exposure types, PD range bands, and definitions with U.S. regulatory reporting for Basel III in Citi's Fourth Quarter 2022 FFIEC 101 Report.

## Credit Losses

The table below presents actual credit losses for wholesale exposures and each subcategory of retail exposures during the three months ended December 31, 2022.

**Table 11: Credit Losses for Wholesale Exposures and Each Retail Exposure Subcategory<sup>(1)</sup>**

<i>In millions of dollars</i>	<b>Three Months Ended December 31, 2022</b>
<b>Credit Losses</b>	
Wholesale Exposures	\$ 132
<b>Retail Exposures:</b>	
Residential Mortgage Exposures	10
Qualifying Revolving Exposures	1,188
Other Retail Exposures	137
<b>Total Retail Exposures</b>	<b>\$ 1,335</b>
<b>Total Credit Losses</b>	<b>\$ 1,467</b>
<b>Credit Recoveries</b>	
Wholesale Exposures	\$ 12
<b>Retail Exposures:</b>	
Residential Mortgage Exposures	10
Qualifying Revolving Exposures	231
Other Retail Exposures	34
<b>Total Retail Exposures</b>	<b>\$ 275</b>
<b>Total Credit Recoveries</b>	<b>\$ 287</b>
<b>Net Credit Losses</b>	<b>\$ 1,180</b>

(1) Credit losses are presented on a U.S. GAAP basis.

Net credit losses increased from \$887 million during the three months ended September 30, 2022 to \$1,180 million during the three months ended December 31, 2022. The \$293 million quarter-over-quarter increase was primarily driven by increases in net losses arising from Qualifying Revolving Exposures and Wholesale Exposures.

For additional information regarding Citi's net credit losses see “*Managing Global Risk—Credit Risk*” in Citi’s 2022 Form 10-K.

## COUNTERPARTY CREDIT RISK: OTC DERIVATIVE CONTRACTS, REPO-STYLE TRANSACTIONS AND ELIGIBLE MARGIN LOANS

---

### Counterparty Credit Risk Exposures

Counterparty credit risk is the risk that the counterparty to a transaction could default before the final settlement of the transaction's cash flows. For derivatives, counterparty credit risk also arises from unsettled security, commodity and foreign exchange transactions with a contractual settlement or delivery lag that is longer than the lesser of the market standard for the particular instrument or five business days (long settlement transactions). Repo-style transactions consist of repurchase or reverse repurchase transactions, or securities borrowing or securities lending transactions, including transactions in which Citi acts as agent for a customer and indemnifies the customer against loss, and are based on securities taken or given as collateral, which are marked-to-market, generally daily. Eligible margin loans are extensions of credit collateralized by liquid and readily marketable debt or equity securities, or gold, and that satisfy other conditions under the U.S. Basel III rules.

### Methodology Used to Assign Economic Capital

Citi calculates economic capital for the counterparty credit risk by simulating the potential loss resulting from counterparty defaults. For OTC derivative contracts, Citi's economic capital calculation further captures the potential market rate driven changes in each counterparty's CVA. The CVA economic capital calculation uses a process that integrates stress scenarios and Monte Carlo simulation.

### Methodology Used to Assign Credit Limits

Single name concentration credit limits are not specific to counterparty credit risk. Rather, single name concentration credit limits are managed at the relationship level. Relationship exposure includes the aggregate of all credit products, including loans, counterparty credit risk, trade and transaction services, etc. The process for managing a relationship's credit risk limit is guided by: core credit policies, procedures and standards, experience and judgment of credit risk professionals, and the amount of exposure and risk capital at risk.

While internal ratings are the starting point in establishing credit assessments, a range of factors, such as quality of management and strategy, nature of industry, and regulatory environment, among others, are also taken into consideration for obligor limits and approval levels. Exposure to credit risk on derivatives is also impacted by market volatility, which may impair the ability of clients to satisfy their obligations to Citi. Credit risk analysts conduct daily monitoring versus limits and any resulting issues are escalated to credit officers and business management as appropriate. Usage against the credit limits may reflect netting agreements and collateral.

### Counterparty Credit Risk Capital Calculations

In accordance with the requirements of the U.S. Basel III rules, Citi calculates counterparty credit risk-weighted assets using the PD and LGD estimates described in the “*Credit Risk: Portfolio Disclosures—Internal Ratings Based Approach*” section above. The methods used to determine EAD are described below.

For purposes of calculating regulatory capital for counterparty credit risk for derivatives, in accordance with the U.S. Basel III rules, Citi uses a Monte Carlo simulation to determine an expected positive exposure (EPE) measure as input to Citi's EAD calculation. The model is calibrated with historical volatilities and correlations subject to a set of independent internal validation and statistical backtesting standards. The model utilizes a standard supervisory alpha multiplication factor of 1.4. Citi also uses the Standardized Approach for Counterparty Credit Risk (SA-CCR) for certain counterparty credit risk exposures. This method assigns to each transaction a regulatory stipulated exposure based on the mark-to-market value and a measure of potential future exposure. To calculate EAD for repo-style transactions across all portfolios and for eligible margin loans within Citi's prime lending portfolios, Citi uses the simple VaR methodology. For positions that do not use simple VaR, Citi uses the (supervisory) collateral haircut approach as prescribed in the U.S. Basel III rules. Counterparty credit risk treatment also includes an explicit capital calculation (CVA RWA) to address potential fair value losses from CVA. Citi primarily utilizes the advanced CVA RWA approach for its OTC derivatives. However, the simple CVA RWA approach is used for exchange traded derivatives, which are exposures that are cleared through central counterparties for which the SA-CCR method is applied and for immaterial OTC derivative exposures from counterparties that were deemed to not have specific risk model approval; this approach is also used for certain exposures in non-U.S. jurisdictions.

Netting agreements and margin collateral may be recognized as credit risk mitigants provided they meet certain eligibility criteria outlined in the U.S. Basel III rules, as described below.

### Derivative Master Netting Agreements

Credit risk from derivatives is mitigated where possible through netting agreements whereby derivative assets and liabilities with the same counterparty can be offset. Citi policy requires all netting arrangements to be legally documented. ISDA master agreements are Citi's preferred manner for documenting OTC derivatives. The agreements provide the contractual framework within which dealing activities across a full range of OTC products are conducted and contractually binds both parties to apply close-out netting across all outstanding transactions covered by an agreement if either party defaults or other predetermined events occur. Citi considers the level of legal certainty regarding enforceability of its offsetting rights under master netting agreements and credit support annexes to be an important factor in its risk management process. For further information on Citi's policies regarding master netting agreements see Note 23, “*Derivatives*” in the Notes to Consolidated Financial Statements in Citi's 2022 Form 10-K.

## **Policies for Securing, Valuing and Managing Collateral, and Establishing Credit Reserves**

Citi's policies and procedures cover management and governance of financial assets (including securing and valuing collateral) utilized for the purpose of mitigating the credit risk of OTC derivatives, repo-style transactions and eligible margin loans. Specifically, businesses are required to establish standard eligibility criteria for collateral usage and review processes for approving non-standard collateral. Industry standard legal agreements combined with internal reviews for legal enforceability are used to achieve a perfected security interest in the collateral. Additionally, risk management establishes guidelines on appropriate collateral haircuts related to repo-style transactions and eligible margin loans. Potential correlations between the exposure and the underlying collateral are reflected through appropriate haircuts. A haircut is the percentage of reduction in current market value applicable to each type of collateral and is largely based on liquidity and price volatility of the underlying security. Citi considers the liquidity and marketability of its collateral in determining its eligibility as a risk mitigant and in applying appropriate haircuts under the U.S. Basel III rules.

The current market value of collateral is monitored on a regular basis. Margin procedures are established for managing margin calls for which daily margining is considered best practice in order to maintain an appropriate level of collateral coverage reflecting market value fluctuations. Trades are reconciled on a regular basis that is consistent with regulatory or industry best practice guidelines and margin dispute processes are in place. Procedures are established surrounding collateral substitution and collateral reuse/rehypothecation. Applicable limits, triggers or thresholds are utilized to monitor and control Citi's collateral concentrations to different types of asset classes.

Additionally, for eligible margin loans, procedures are established to ensure an appropriate level of allowance for credit losses, and the counterparty credit risk arising on derivative transactions is managed through CVA to the fair value of derivative contracts.

## **Primary Types of Collateral**

Eligible collateral including (but not limited to) cash, G10 Government and Government-Sponsored Enterprises debt securities is collected, posted or exchanged as margin on OTC derivative transactions, at a counterparty level, pursuant to applicable regulatory margin requirements. Citi also collects OTC Swap margin in excess of minimum requirements, at such times and in such forms and amounts that Risk Management determines necessary, to appropriately address the credit risk posed by particular counterparties. Collateral posted and received to open and maintain a master netting agreement with a counterparty, in the form of cash and eligible securities, may be segregated in an account at a third-party custodian pursuant to an Account Control Agreement. Where such collateral segregation is elected, the custody agreement must prohibit re-hypothecation or re-pledging of the collateral by the custodian.

With respect to repo-style transactions and eligible margin loans, the majority of the collateral is in the form of cash, government debt securities (mostly investment grade), and public equity securities. Instruments such as corporate and municipal

bonds, U.S. agency securities and/or mortgage-backed securities may also be accepted, though to a lesser degree, and with appropriate agreement.

## **Policies With Respect to Wrong-Way Risk Exposures**

Wrong-way risk (WWR) occurs when a movement in a market factor causes Citi's exposure to a counterparty to increase at the same time as the counterparty's capacity to meet its obligations is decreasing. Stated differently, WWR occurs when exposure to a counterparty is adversely correlated with the credit quality of the counterparty.

Specific WWR arises when the exposure to a particular counterparty is positively correlated with the probability of default of the counterparty due to the nature of the transactions with the counterparty. General WWR is less definite than specific WWR and occurs where the credit quality of the counterparty is subject to impairment due to changes in macroeconomic factors.

WWR in a trading exposure arises when there is significant correlation between the underlying asset and the counterparty which, in the event of default, would lead to a significant mark-to-market loss. The interdependence between the counterparty credit exposure and underlying reference asset or collateral for each transaction can exacerbate and magnify the speed in which a portfolio deteriorates. Thus, the goal of Citi's WWR policy is to provide best practices and guidelines for the identification, approval, reporting and mitigation of specific and general WWR.

Citi's WWR policy further uses ongoing product stress testing to identify potential general WWR using simulated macroeconomic scenarios.

## **Impact of Citi Credit Rating Downgrade on Collateral Pledged**

Certain OTC derivative instruments contain provisions that require Citi to either post additional collateral or immediately settle any outstanding liability balances upon the occurrence of a specified event related to the credit risk of Citi. These events, which are defined by the existing derivative contracts, are primarily downgrades in the credit ratings of Citi and its affiliates. In the event that Citigroup and Citibank were downgraded a single notch by all three major rating agencies as of December 31, 2022, Citi could be required to post an additional \$0.9 billion as either collateral or settlement of the derivative transactions. In addition, Citi could be required to segregate with third-party custodians collateral previously received from existing derivative counterparties in the amount of \$15.0 million upon the single notch downgrade, resulting in aggregate cash obligations and collateral requirements of approximately \$0.9 billion.

For repo-style transactions in which Citi acts as a principal, in the event that Citi were to receive a credit rating downgrade as of December 31, 2022, the net impact to Citi resulting from the potential posting of collateral and early termination resulting in an unwinding of transactions would not be material. For repo-style transactions in which Citi acts as agent on behalf of customers and indemnifies customers against loss (i.e., agent customer securities lending and repurchase agreement transactions), Citi would not be required to provide any collateral to the borrower of the securities nor to the lender, if Citi were to receive a credit rating downgrade. Nevertheless, certain repo-style transaction agreements may provide that a Citi credit rating downgrade,

default, or insolvency, could result in an early termination of such repo-style transactions, with Citi responsible for administering the resulting returns solely in its capacity as agent.

No eligible margin loan made by Citi requires the posting of additional collateral if it were to receive a credit rating downgrade.

For additional information on the impact of Citi credit rating downgrades refer to Note 23, “*Derivatives—Credit-Risk-Related Contingent Features in Derivatives*” in the Notes to Consolidated Financial Statements and “*Managing Global Risk—Liquidity Risk—Credit Ratings*” in Citi’s 2022 Form 10-K.

### OTC Derivative Counterparty Credit Risk Disclosures

For information regarding counterparty credit risk related to OTC derivative exposures, including the impact of netting contracts and the offsetting of collateral held, see Note 23, “*Derivatives*” in the Notes to Consolidated Financial Statements in Citi’s 2022 Form 10-K.

The following table presents counterparty credit risk for OTC derivatives, as well as repo-style transactions and eligible margin loans, under both the internal models and supervisory methods as of December 31, 2022.

**Table 12: Counterparty Credit Risk Exposures by Product**

<i>In millions of dollars</i>	December 31, 2022	
	Total Counterparty Credit Risk	
	EAD	RWA <sup>(1)</sup>
OTC Derivatives	\$ 171,469	\$ 93,531
Repo-Style Transactions and Eligible Margin Loans	64,910	25,630
<b>Total Exposure</b>	<b>\$ 236,378</b>	<b>\$ 119,161</b>

(1) Risk-weighted assets for counterparty credit risk are included within wholesale exposures in Table 1 above.

### Credit Derivative Notional Amounts

The following table presents the gross notional amounts of credit derivatives, by product type and purpose, which were purchased and sold by Citi and outstanding as of December 31, 2022. Credit derivatives purchased or sold for Citi’s intermediation activities on behalf of third party clients, including market-making and related hedging activities, are presented separately from those used to mitigate credit risk in Citi’s loan portfolios and certain other credit risk exposures.

**Table 13: Notional Amounts of Purchased and Sold Credit Derivatives**

<i>In millions of dollars</i>	December 31, 2022			
	Own Credit Portfolio		Client Intermediation Activities	
	Purchased	Sold	Purchased	Sold
Credit Default Swaps	\$ 33,214		\$ 560,653	\$ 547,120
Total Return Swaps			17,658	6,632
Credit Options			30,114	39,384
<b>Total Credit Derivatives</b>	<b>\$ 33,214</b>	<b>\$ —</b>	<b>\$ 608,425</b>	<b>\$ 593,136</b>

Citi also enters into credit derivatives in conjunction with its intermediation activities in order to mitigate counterparty credit risk arising from OTC derivative contracts. As of December 31, 2022, the net notional amount of outstanding credit protection bought and sold for OTC derivative contracts was approximately \$7.3 billion of purchased protection. Purchased credit protection for repo-style transactions was not significant as of December 31, 2022.

Citi does not currently use credit derivatives to mitigate counterparty credit risk arising from eligible margin loans. However, eligible margin loans may be included within the aggregate population of banking book transactions for which Citi buys or sells protection as part of its credit risk mitigation activities.

For additional information on Citi's credit derivatives, refer to Note 23, "Derivatives" in the Notes to Consolidated Financial Statements in Citi's 2022 Form 10-K.

### **Overview**

As part of its risk management activities, Citi uses various risk mitigants to hedge portions of the credit risk in its portfolios, in addition to outright asset sales. Credit risk mitigation, including netting, collateral and other techniques, is important to Citi in the effective management of its credit risk exposures.

Generally, in consultation with legal counsel, Citi determines whether collateral documentation is legally enforceable and gives Citi the right to liquidate or take possession of collateral in a timely manner in the event of the default, insolvency, bankruptcy or other defined credit event of the obligor. Also in consultation with legal counsel, Citi approves relevant jurisdictions and counterparty types for netting purposes.

### **Credit Risk Mitigation by Exposure Type**

#### ***Wholesale Banking Book Collateral: Valuation and Management***

Collateral assets taken as credit risk mitigants in the wholesale banking book receive initial and subsequent periodic valuations. This is part of the facility approval process, and is aimed at ensuring a comprehensive understanding of the potential recovery value of the pledged collateral asset in an event of obligor default. Collateral must be realizable and have either (1) a value capable of being established on the open market or (2) a value that can be provided by a recognized external market source or independent valuer. Valuations must also take into account the environment, the relevant market, and the type of collateral. Different collateral asset types and borrowers' risk profiles may require different processes with respect to valuation, the frequency of evaluation (and re-evaluation), inspection, and verification.

#### ***OTC Derivative Contracts, Repo-Style Transactions and Eligible Margin Loans***

Netting is generally permitted for OTC derivative contracts and repo-style transactions. In some cases, netting is also permitted for certain margin lending transactions.

For information on policies and processes for collateral valuation and management, as well as the notional amount of credit derivatives used for counterparty credit risk mitigation, see the “*Counterparty Credit Risk: OTC Derivative Contracts, Repo-Style Transactions and Eligible Margin Loans*” section above.

#### ***Retail Exposures***

For information on policies and processes for collateral valuation and management for Citi's retail businesses, see the “*Retail Credit Risk Management*” section above.

#### ***Wholesale Banking Book Exposures***

The main type of credit risk mitigants utilized for the wholesale banking book exposures are guarantees or other types of full support from parents or third parties, as well as collateral such as real estate or various asset types (securities, receivables, inventories, machinery, etc.).

#### ***Collateral Concentrations***

The collateral obtained for Citi's wholesale banking book portfolios is generally well diversified across a wide range of assets such as cash, securities, other financial assets (e.g., accounts receivable), real estate and physical assets (plant and equipment, ships, aircraft, etc.), with no or limited concentration within any one asset type. Concentration Risk Identification Thresholds (CRITs) have been set to enable the flagging of outsized collateral holdings, and monitoring is also conducted on a risk-differentiated basis to identify and manage positions that could become subject to greater realization or monetization risks.

#### ***Guarantors and Credit Derivative Counterparties and their Creditworthiness***

The general purpose for hedging is compliance with various risk limits with the largest driver being hedging single name concentrations in the banking book at the relationship level. A dedicated group within Citi's risk management coordinates risk mitigation for credit risk in the banking book, including monitoring effectiveness and compliance with managing the exposures to be within risk limits on a regular basis. Actions for mitigating accrual credit risk in the banking book are generally limited to purchasing single-name credit default swaps from third parties, and direct asset sales to third parties.

Eligible credit default swap counterparties serving as guarantors of credit risks in the banking book generally include funds, hedge funds, sovereign funds, regional banks, commercial banks, investment banks or insurance companies that are rated BBB- or better by S&P and Moody's with established ISDA agreements and trading limits in place.

Additionally, Citi Global Wealth typically obtains personal guarantees from individuals and/or other guarantors. Citi also accepts capital call guarantees from uncalled private equity fund capital to secure ring-fenced private equity investment debt.

#### ***Recognizing Credit Risk Mitigation***

The table below presents the amount of wholesale exposures in the banking book that were covered by eligible guarantees, including eligible credit derivatives, as of December 31, 2022.

**Table 14: Wholesale Banking Book Exposures Covered by Eligible Guarantees or Credit Derivatives<sup>(1)(2)</sup>**

<i>In millions of dollars</i>	<b>December 31, 2022</b>
<b>Exposure Type:</b>	
Debt Securities	\$ 1,629
Loans	15,006
Unused Commitments and Guarantees	32,631
Other <sup>(3)</sup>	391
<b>Total Exposures</b>	<b>\$ 49,657</b>

(1) Wholesale banking book exposures are presented on an EAD basis.

(2) For U.S. Basel III purposes, the benefit of eligible guarantees and eligible credit derivatives for wholesale banking book exposures is captured through PD substitution in the calculation of risk-weighted assets. For retail exposures, see footnote (4) to Table 8 above.

(3) Includes deposits with banks and other assets.

### Overview

The regulatory capital framework for securitization exposures is a risk sensitive framework that focuses on credit risks that have been transferred and repackaged. A securitized transaction is a transaction where all or a portion of the credit risk of one or more financial assets is transferred to one or more third parties. In addition, the related credit risk of the underlying transferred financial assets is tranching. That is, the credit risk is separated into at least two levels of seniority of claims with each class having a different priority on the cash flows from the underlying pool of exposures.

Securitizations can either be traditional securitizations or synthetic securitizations, depending on how the credit risk associated with the underlying assets is transferred. If the credit risk is transferred to third parties through the use of credit derivatives or guarantees, the securitization is considered synthetic. Otherwise, the securitization is considered traditional. Furthermore, any securitization which has more than one underlying exposure and in which one or more of the underlying exposures are securitization exposures is a re-securitization exposure. Asset-backed securities (ABS) and collateralized debt obligations (CDOs) and collateralized loan obligations (CLOs) in which any of the underlying exposures in these structures are themselves securitization exposures (such as an ABS, CDO or CLO tranche(s)) are examples of re-securitizations.

### Objectives

Citi plays a variety of roles in asset securitization transactions, including originator, sponsor and investor. More specifically, Citi acts as underwriter of asset-backed securities, depositor of the underlying assets into securitization vehicles, trustee to securitization vehicles and counterparty to securitization vehicles under derivative contracts. Citi serves as investor in securitization exposures through holdings of such exposures in the banking book. In addition, Citi serves as market maker in securitized products primarily through trading book activity by assisting clients in securitizing their financial assets. Citi may also provide administrative, asset management, underwriting, liquidity facilities and/or other services to the resulting securitization.

Citi provides financing through warehouse facilities for corporate loans for CLO issues; consumer assets for ABS issues; and whole mortgage loans for new residential mortgage backed securities (RMBS) and commercial mortgage backed securities (CMBS) issues. Citi also provides backstop liquidity facilities to asset-backed commercial paper conduits (ABCP Conduits) and Municipal Tender Option Bond programs. Citi, in its role as servicer, may create a securitization exposure(s) by providing servicer cash advances on residential mortgage loan securitizations.

Citi holds various securitization exposures in the banking book and the trading book. Citi invests in highly rated CMBS and RMBS in the investment portfolio. Citi also holds ABS owned by ABCP Conduits that are consolidated onto Citi's balance sheet. Citi holds securitization positions in the trading

book through secondary market trading, including certain asset backed commercial paper issued by third party bank conduits. In some cases, these positions may be re-securitizations.

Citi is involved in synthetic securitizations which include purchasing credit protection through credit default swaps with the CDO/CLO, owning a portion of the capital structure of the CDO/CLO in the form of both unfunded derivative positions and funded notes, entering into interest-rate swap and total return swap transactions with the CDO/CLO, lending to the CDO/CLO, and making a market in the funded notes. In a synthetic securitization of assets held on the balance sheet, there is no change in the financial accounting treatment for the assets securitized.

Citi engages in re-securitization transactions in which debt securities are transferred to a variable interest entity (VIE) in exchange for new beneficial interests. Private-label re-securitizations are backed by either residential or commercial mortgages and are often structured on behalf of clients. Citi retains senior and subordinated beneficial interests in private-label re-securitization transactions. All re-securitizations of private label residential mortgage securities are subject to an enhanced approval process, including review by the New Activity Committee (NAC). Citi also re-securitizes U.S. government-agency guaranteed mortgage-backed securities.

Citi enters into these securitization arrangements for a variety of business purposes. In addition to providing a source of liquidity and less expensive funding, securitizing assets reduces credit exposure to the borrowers. Securitization arrangements offer investors access to specific cash flows and risks created through the securitization process. Securitization arrangements assist Citi and Citi's customers in monetizing their financial assets at more favorable rates than Citi or the customers could otherwise obtain. Citi uses securitization transactions to segregate the seller's credit risk from the securitized assets and the cash flows generated from those assets, which are to be used for the benefit of purchasers or lenders in the transaction. The segregation is achieved through the transfer of the securitized assets in a 'true sale' from the seller to a bankruptcy-remote special purpose entity (SPE), thereby providing legal isolation of the pool of assets from the default risk of the seller.

### Risks

Securitization transactions can involve a number of risks including portfolio risk, seller's risk, and liquidity risk. Portfolio risk arises from the performance of the underlying asset pool (i.e., payment rates, dilution, write-offs/losses). Seller risk represents the portion of unsecured credit exposure in a transaction with the seller. Certain securitization structures give rise to contingent liquidity risk, that is, the likelihood that liquidity must be provided unexpectedly, potentially at a time when it is already under stress. Liquidity risk can occur in asset-backed commercial paper conduits or in cases where liquidity backstop arrangements have been provided.

Citi's risk management organization plays an active role in the review and oversight of securitization exposure identification. The nature of identifying a securitization is primarily an economic substance test where Citi seeks to identify evidence of tranching of credit risks in a variety of ways. Securitization identification is subject to a robust review process with controls and oversight. Securitizations can arise in various forms, including but not limited to the following:

- asset- and mortgage-backed securities;
- loans, lines of credit, guarantees and financial standby letters of credit with embedded credit tranching or facing securitization SPEs;
- credit derivatives referencing a securitization tranche;
- credit enhancing interest only strips;
- assets sold with retained tranching recourse;
- single assets with tranching risk;
- OTC derivatives with securitization SPEs;
- implicit support to a securitization vehicle; and
- credit enhancing representation and warranties.

Citi manages its securitization and re-securitization positions within an established risk management policy framework whereby each business and Citi's risk management monitors changes in positions and changes in the portfolio structure of securitization and re-securitization positions. Credit risk management is responsible for determining the overall risk appetite for securitization transactions, approving extension of credit and ensuring data capture associated with those extensions of credit are accurate and are within Citi's risk appetite and limits, and ensuring that the transactions meet Citi's standards for Basel III compliance. Market risk management is responsible for ensuring that securitization transactions that are booked in the trading book are consistent with business mandate and risk management policies. Securitization and re-securitization positions are subject to an established limit monitoring framework to ensure diversification in Citi's portfolio.

Citi employs several risk mitigation approaches to manage risk appetite for its securitization and re-securitization positions. Under the U.S. Basel III rules, a bank must demonstrate that it has truly transferred credit risk of the underlying exposures to one or more third parties to be able to recognize for risk-based capital purposes the use of a credit risk mitigant. The mitigant must meet the requirements of an eligible guarantee or eligible credit derivative. Failure to meet the operating requirements for a synthetic securitization prevents a bank from using the securitization framework and requires a bank to hold capital against the underlying exposures as if they have not been securitized.

### **Risk-Based Capital Approaches**

Citi utilizes the "hierarchy of approaches" to compute regulatory capital on securitization transactions as required by the U.S. Basel III rules. If a securitization exposure is not required to be deducted from regulatory capital, Citi first calculates the risk-based capital requirement using the Supervisory Formula Approach (SFA). The SFA calculation is a models-driven approach based on complex mathematical formulas that consider the attributes of both the securitization structure and the underlying exposures. SFA requires inputs such as PD and LGD on the underlying collateral. Citi utilizes approved SFA models for a variety of asset classes including credit card receivables, trade receivables, student loans, auto loans, commercial loans and other consumer asset classes within traditional and synthetic securitizations.

Where data is not sufficient to build an SFA model, Citi uses the Simplified Supervisory Formula Approach (SSFA). SSFA requires inputs including the following to calculate regulatory capital:

- Attachment Point: the point at which the collateral losses from underlying assets backing a tranche will have reached an amount that those losses will be applied to the tranche in the form of principal write-downs;
- Detachment Point: the point at which the tranche will be completely wiped out or written-down by losses from the collateral backing the tranche;
- Weighted Average Capital: the weighted average capital charge of the assets in the deal;
- Seriously Delinquent: the percentage of the collateral that are seriously delinquent in the deal (e.g., 90+ days past due, in foreclosure, in bankruptcy); and
- Calibration Parameter: a parameter that increases the riskiness of a tranche for re-securitizations.

A risk weight of 1,250% must be applied to a securitization exposure that does not qualify for the SFA and where Citi does not apply the SSFA, or which is not otherwise required to be deducted from regulatory capital.

## Securizations and VIEs

See the following references for certain information regarding securizations and VIEs:

### Consolidation Policy and Securitization Exposures

- See Note 22, “*Securizations and Variable Interest Entities*” in the Notes to Consolidated Financial Statements in Citi’s 2022 Form 10-K.

### Transfers of Financial Assets and Gain on Sale

- See Note 1, “*Summary of Significant Accounting Policies*” in the Notes to Consolidated Financial Statements in Citi’s 2022 Form 10-K.

### Valuation of Retained or Purchased Interests

- Note 25, “*Fair Value Measurement*” in the Notes to Consolidated Financial Statements in Citi’s 2022 Form 10-K.

## Recognizing Liabilities to Provide Support to Securizations

- See Note 27, “*Pledged Assets, Restricted Cash, Collateral, Guarantees and Commitments*” in the Notes to Consolidated Financial Statements in Citi’s 2022 Form 10-K.
- See Note 29, “*Contingencies*” in the Notes to Consolidated Financial Statements in Citi’s 2022 Form 10-K.

The table below presents the total outstanding principal amount of assets securitized by Citi (excluding assets in consolidated securitization variable interest entities) for which Citi retains an exposure that is not subject to the market risk capital rules. Third-party assets held in Citi-sponsored vehicles are shown separately from securitized assets that were originated or purchased by Citi. This table also presents the total principal amount of outstanding assets intended to be securitized by Citi.

**Table 15: Outstanding Securitization Exposures by Underlying Exposure Type**

<i>In millions of dollars</i>	As of December 31, 2022			
	Originator		Sponsor	
	Traditional Securitizations	Synthetic Securitizations	Traditional Securitizations	Assets Pending Securitization
Commercial Real Estate Loans	\$ 28,533	\$ —	\$ —	\$ —
Corporate Loans	—	21,663	—	—
Credit Card Receivables	—	—	—	—
Residential Mortgages	16,079	—	—	—
Other Assets	2,559	8,752	1,444	—
<b>Total</b>	<b>\$ 47,171</b>	<b>\$ 30,415</b>	<b>\$ 1,444</b>	<b>\$ —</b>

The total outstanding principal amount of securitizations with Citi acting as originator increased quarter-over-quarter mainly due to an increase in synthetic securitization activities for corporate loans, partially offset by a decrease in traditional securitization activities for other assets.

The table below presents the total principal amount of assets securitized by Citi during the twelve months ended December 31, 2022, excluding assets in consolidated securitization variable interest entities. Third-party assets securitized in Citi-sponsored vehicles are shown separately from securitized assets that were originated or purchased by Citi. Additionally, securitizations for which Citi retains an exposure that is not subject to the market risk capital rules are shown separately from securitizations for which Citi did not retain an exposure. The table also presents any gains (losses) on sale recognized during the twelve months ended December 31, 2022 related to Citi's securitization activity.

**Table 16: Securitization Activity by Underlying Exposure Type**

For the Twelve Months Ended December 31, 2022							
<i>In millions of dollars</i>	Originator				Sponsor		Recognized Gain (Loss) on Sale
	Traditional Securitizations		Synthetic Securitizations		Traditional Securitizations		
	Exposure Retained	Exposure Not Retained	Exposure Retained	Exposure Not Retained	Exposure Retained	Exposure Not Retained	
Commercial Real Estate Loans	\$ 92	\$ 6,377	\$ —	\$ —	\$ —	\$ 9,864	\$ 51
Corporate Loans	—	—	—	—	—	—	—
Credit Card Receivables	—	—	—	—	—	—	—
Residential Mortgages	198	4,545	—	—	—	—	12
Other Assets	—	—	—	—	430	—	—
<b>Total</b>	<b>\$ 290</b>	<b>\$ 10,922</b>	<b>\$ —</b>	<b>\$ —</b>	<b>\$ 430</b>	<b>\$ 9,864</b>	<b>\$ 63</b>

The table below presents the amount of securitized assets that are past due as of December 31, 2022, and the amount of impairment losses recognized by Citi during the three months ended December 31, 2022.

**Table 17: Impairment by Underlying Exposure Type**

<i>In millions of dollars</i>	As of December 31, 2022	For the Three Months Ended December 31, 2022
	Past Due Securitized Assets <sup>(1)</sup>	Impairment Losses Recognized by Citi <sup>(2)</sup>
Commercial Real Estate Loans	\$ —	\$ —
Corporate Loans	83	11
Credit Card Receivables	—	—
Residential Mortgages	926	—
Other Assets	60	—
<b>Total</b>	<b>\$ 1,069</b>	<b>\$ 11</b>

(1) Represents the outstanding principal balance of securitized assets that are 90 days or more past due.

(2) Represents impairment losses recognized by Citi related to retained securitization exposures that are not subject to the market risk capital rules, and excludes changes in fair value recognized in earnings for retained securitization exposures that are classified as trading securities for U.S. GAAP purposes.

Tables 18 and 19 present Citi's banking book exposures subject to securitization treatment, presented on an EAD basis, under the U.S. Basel III rules.

**Table 18: Securitization and Re-securitization Exposures by Risk Weight Band<sup>(1)</sup>**

<i>In millions of dollars</i>	December 31, 2022

(1) Securitization exposures that have been deducted from Tier 1 Capital are not included within RWA.

(2) During the three months ended December 31, 2022, there were no re-securitization exposures to which credit risk mitigation had been applied.

**Table 19: Securitization Exposures by Collateral Type<sup>(1)</sup>**

<i>In millions of dollars</i>	December 31, 2022			
	Exposure			Total RWA
	On-Balance Sheet	Off-Balance Sheet	Total	
Auto Loans	\$ 6,323	\$ 2,814	\$ 9,137	\$ 2,049
Commercial Real Estate Loans	11,387	2,266	13,653	4,658
Corporate Loans	46,603	11,298	57,901	12,975
Credit Card Receivables	4,833	2,876	7,709	1,754
Residential Mortgages	5,324	370	5,694	1,974
Student Loans	—	—	—	—
Other	36,304	14,935	51,239	24,518
<b>Total</b>	<b>\$ 110,774</b>	<b>\$ 34,559</b>	<b>\$ 145,333</b>	<b>\$ 47,929</b>

(1) Securitization exposures that have been deducted from Tier 1 Capital are not included within RWA.

**Securitization Exposures Deducted from Regulatory Capital**

As of December 31, 2022 Citi does not have any after-tax gain-on-sale on a securitization that has been deducted from CET1 Capital, nor any credit-enhancing interest-only strips that have been assigned a 1,250% risk weight.

**Re-securitization Exposures Covered by Guarantees**

As of December 31, 2022 no re-securitization exposures were covered by guarantees.

### Overview

Citi holds equity positions to generate capital gains for its private equity subsidiaries. It can also hold positions as a result of debt to equity conversions, or to maintain strategic relationships. Citi's equity investments (except those accounted for under the equity method of accounting or those that result in consolidation of the investee) are primarily measured at fair value with changes in fair value recognized in net income. However, Federal Reserve Bank and Federal Home Loan Bank stock, as well as certain exchange seats, are presented at cost. Certain equity positions are accounted for under the equity method, or, for Citi's investments in qualified affordable housing partnerships, recorded at cost plus unfunded equity commitments and subsequently amortized in proportion to the amount of tax credits and other tax benefits received.

Citi is also allowed to elect, on an instrument-by-instrument basis, to measure non-marketable equity investments using a measurement alternative. Under the measurement alternative, the investment is carried at cost plus or minus changes resulting from observable prices in orderly transactions for the identical or a similar investment of the same issuer, less impairment (if any).

The disclosures below are consistent with the definition of equity investments under the U.S. Basel III rules. For further information on equity investments, see Note 1, "*Summary of Significant Accounting Policies*" and Note 13, "*Investments*" in the Notes to Consolidated Financial Statements in Citi's 2022 Form 10-K.

### Risk-Weighting Approaches

As required under the U.S. Basel III rules, Citi applies different approaches in calculating risk-weighted assets for equity exposures not subject to the market risk capital rules, depending upon whether or not the exposure is to an investment fund. Furthermore, three alternative approaches may be utilized in deriving risk-weighted assets for equity exposures to an investment fund, with the approach applied largely a function of the information available.

Under the Simple Risk Weight Approach the adjusted carrying value for each type of equity exposure is multiplied by a prescribed risk weight. The adjusted carrying value for an on-balance sheet equity exposure is the carrying value of the exposure. The adjusted carrying value of an equity derivative is the effective notional principal amount of the exposure, the size of which is equivalent to a hypothetical on-balance sheet position in the underlying equity instrument that would evidence the same change in fair value (measured in dollars) given a small change in the price of the underlying equity instrument, minus the adjusted carrying value of the on-balance sheet component of the exposure. The adjusted carrying value of an equity exposure is used in the calculation of Hedge Pairs. For an off-balance sheet commitment to acquire an equity exposure (an equity commitment) the effective notional amount of the exposure is multiplied by an applicable CCF. The U.S. Basel III rules also permit Citi, subject to prior written approval from regulators, to calculate risk-weighted assets for equity exposures that are not

equity exposures to investment funds by utilizing the Internal Models Approach. However, Citi does not currently utilize the Internal Models Approach for any of its equity exposures.

For equity exposures to investment funds, Citi applies the Full Look-Through Approach, the Simple Modified Look-Through Approach, or the Alternative Modified Look-Through Approach. In accordance with the Full Look-Through Approach, risk weights are applied on a proportional ownership share basis to each equity exposure held by the fund, as if Citi held the exposure directly. Under the Simple Modified Look-Through Approach, the highest risk weight applicable to any equity exposure the investment fund is permitted to hold under its prospectus, partnership agreement, or similar agreement is applied to the adjusted carrying value of Citi's equity exposure to the fund in deriving the amount of risk-weighted assets. With regard to the Alternative Modified Look-Through Approach, the adjusted carrying value of an equity exposure to an investment fund is assigned on a pro-rata basis to the different risk weight categories based on the investment limits in the fund's prospectus, partnership agreement, or similar contract that defines the fund's permissible investments. Under this approach it is assumed that the fund invests to the maximum extent permitted under its investment limits in the exposure type with the highest applicable risk weight and continues to make investments in order of the exposure type with the next highest applicable risk weight, until the maximum total investment is reached. The assignment of the pro-rata investment limits risk weights for all exposure types within the fund will not exceed 100 percent.

The following table presents Citi's equity exposures not subject to the U.S. Basel III market risk capital rule, using the Simple Risk Weight, the Full Look-Through, the Simple Modified Look-Through, and the Alternative Modified Look-Through Approaches in deriving risk-weighted assets as of December 31, 2022.

**Table 20: Equity Exposures Not Subject to the Market Risk Capital Rules**

	December 31, 2022				
<i>In millions of dollars, except percentages</i>	Risk Weight Category	Carrying Value <sup>(1)(2)</sup>	Fair Value <sup>(2)</sup>	Effective Risk Weight <sup>(3)</sup>	RWA <sup>(4)</sup>
<b>Simple Risk Weight Approach:</b>					
Equity Exposures Subject to a 0% Risk Weight	0 %	\$ 4,503	\$ 4,503	0 %	\$ —
Equity Exposures Subject to a 20% Risk Weight	20	917	917	20	183
Community Development Equity Exposures	100	3,202	2,743	100	3,633
Publicly Traded Equity Exposures <sup>(5)</sup>	300	64	78	100	64
Non-publicly Traded Equity Exposures <sup>(5)(6)</sup>	400	19,726	19,764	113	22,296
Equity Exposures in Leveraged Investments Funds	600	7	7	600	50
<b>Total Simple Risk Weight Approach</b>		<b>\$ 28,419</b>	<b>\$ 28,012</b>	<b>91 %</b>	<b>\$ 26,226</b>
<b>Equity Exposures to Investment Funds:</b>					
Full Look-Through Approach	N/A	\$ 10,040	\$ 10,040	21 %	\$ 2,167
Simple Modified Look-Through Approach	N/A	334	334	52	203
Alternative Modified Look-Through Approach	N/A	215	215	209	449
<b>Total Equity Exposures to Investment Funds</b>		<b>\$ 10,589</b>	<b>\$ 10,589</b>	<b>26 %</b>	<b>\$ 2,819</b>
<b>Total Equity Exposures</b>		<b>\$ 39,008</b>	<b>\$ 38,601</b>	<b>73 %</b>	<b>\$ 29,045</b>

(1) Total carrying value of \$39.0 billion consists of approximately \$0.5 billion of publicly traded and approximately \$38.5 billion of non-publicly traded equity exposures.

(2) In accordance with U.S. GAAP, total carrying value includes approximately \$0.5 billion of unfunded equity commitments related to Citi's investments in qualified affordable housing partnerships, but excludes approximately \$0.2 billion of unfunded equity commitments relating to other equity investments. The fair value of Citi's equity exposures does not include any equity commitments.

(3) Equity exposures are presented based on exposure type, which in some cases will yield a blended effective risk weight.

(4) Unfunded equity commitments are included in the derivation of risk-weighted assets.

(5) Equity exposures within the 300% and 400% risk weight categories were, with the exception of significant investments in unconsolidated financial institutions, risk-weighted at 100% due to the aggregate amount of such exposures not exceeding the threshold for higher risk-weighting treatment.

(6) Included in the carry value and fair market value is the adjusted carrying value of an equity derivative that is the effective notional principal amount of the exposure.

### Realized Gains (Losses)

Total net realized gains arising from sales and liquidations of equity investments were \$0.5 million for the three months ended December 31, 2022.

### Latent Revaluation Gains (Losses)

Total net unrealized gains on non-marketable equity investments that are measured at cost, equity method or using the measurement alternative, which are not recognized either in the balance sheet or through earnings, were \$14.2 million as of December 31, 2022, none of which was included in Tier 1 or Tier 2 Capital.

## MARKET RISK

---

### Overview

Market risk is the risk of loss on a position that could result from movements in market prices. Citi's market risk arises principally from trading and market making activities by *ICG's* equity markets and fixed income markets businesses within *Global Markets*.

The market risk disclosures discussed in this section provide quantitative information regarding Citi's market risk capital components, as well as qualitative information, such as that related to Citi's risk management policies, practices and internal models. For additional information on Citi's market risk management and policies, see "*Managing Global Risk—Market Risk*" in Citi's 2022 Form 10-K.

### Basel III Covered Positions

As defined under the U.S. Basel III rules, covered positions include:

- (1) Trading assets or trading liabilities (whether on- or off-balance sheet), as reported for regulatory purposes, that meet the following conditions:
    - (a) The position is a "trading position" or hedges another covered position, other than trading positions that are hedges of Citi's banking book exposures. Within this context, a trading position means a position that is held for the purpose of short-term resale or with the intent of benefiting from actual or expected short-term price movements, or to lock in profits.
- AND
- (b) The position is free of any restrictive covenants on its tradability, or the banking organization, such as Citi, is able to hedge the material risk elements of the position in a two-way market.

OR

- (2) A foreign exchange or commodity position (other than any structural foreign currency positions chosen to be excluded and for which prior supervisory approval has been received), regardless of whether the position is a trading asset or trading liability.

Among the various types of exposures not considered to be a covered position are: (1) intangible assets, including any servicing asset such as mortgage servicing rights; (2) any hedge of a trading position that is deemed to be outside the scope of Citi's hedging strategy; (3) any position that, in form or substance, acts as a liquidity facility that provides support to asset-backed commercial paper; (4) any position that Citi holds with the intent to securitize; or (5) any direct real estate holding.

Accordingly, the characterization of an asset or liability as a "trading asset" or "trading liability" under U.S. GAAP does not determine whether such assets and liabilities are trading positions for Basel III purposes. The scope of positions or exposures

recognized as trading assets or trading liabilities for U.S. GAAP purposes is generally broader than permissible trading positions under the U.S. Basel III rules. Positions or exposures excluded from market risk capital treatment are subject to the credit risk capital rules applicable to non-covered positions.

Citi has established policies and procedures for determining which of its U.S. GAAP trading assets, trading liabilities, and foreign exchange and commodity positions are covered positions under the U.S. Basel III rules, including the establishment of a firm-wide Basel III Boundary Governance Committee that meets quarterly and serves as a decision-making body on key trading book boundary strategies and reporting approaches. Specifically, the Basel III Boundary Governance Committee reviews the intent and ability to trade positions considering a number of key metrics, including a review of the actual holding period of these positions.

### Valuation and Accounting Policies and Methodologies

Accounting Standards Codification (ASC) 820-10, *Fair Value Measurement*, defines fair value, establishes a consistent framework for measuring fair value and requires disclosures in Citi's consolidated financial statements about fair value measurements. Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, and therefore represents an exit price. Material covered positions under the U.S. Basel III rules are carried at fair value on Citi's consolidated balance sheet.

### Determination of Fair Value

Citi uses quoted market prices, when available, to determine the fair value of trading securities, including material covered positions under the U.S. Basel III rules. In some cases where a market price is available, Citi will make use of acceptable practical expedients (such as matrix pricing) to calculate fair value. Similarly, exchange-traded derivatives are measured at fair value, typically using quoted market (i.e., exchange) prices where there is an active market.

If quoted market prices are not available, fair value is based upon internally developed valuation techniques that use, where possible, current market-based parameters, such as interest rates, currency rates, option volatilities, etc. Citi may also apply a price-based methodology, which utilizes, where available, quoted prices or other market information obtained from recent trading activity in positions with the same or similar characteristics to the position being valued.

For bonds and secondary market loans traded over the counter, including securitization and re-securitization positions, Citi generally determines fair value utilizing valuation techniques, including discounted cash flows, price-based and internal models. Fair value estimates from these internal valuation techniques are verified, where possible, to prices obtained from independent vendors.

Derivatives without a quoted price in an active market and derivatives executed over the counter are valued using internal valuation techniques. The valuation techniques and inputs depend on the type of derivative and the nature of the underlying instrument. The principal techniques used to value these instruments are discounted cash flows and internal models, such as derivative pricing models, for example, Black-Scholes and Monte Carlo simulation.

The key inputs depend upon the type of derivative and the nature of the underlying instrument and include interest rate yield curves, foreign-exchange rates, volatilities and correlation. Citi uses overnight indexed swap (OIS) curves as fair value measurement inputs for the valuation of certain derivatives.

### **Market Valuation Adjustments**

Valuation adjustments are applied to ensure that fair value reflects the price at which a position could be exited and is based on the bid-offer spread for an instrument in the market. These valuation adjustments are based on the bid/offer spread for an instrument in the market. Citi also applies valuation adjustments to account for the size of the net open risk position on certain portfolios of financial instruments, and/or where further valuation adjustments are required to achieve an exit price, for example, model valuation adjustments taken to compensate for model limitations.

CVA and funding valuation adjustments (FVA) are applied to the relevant population of OTC derivative instruments where adjustments to reflect counterparty credit risk, own credit risk and term funding risk are required to estimate fair value. This principally includes derivatives whose base valuation (e.g., discounted OIS) requires adjustment for these effects, for example, uncollateralized interest rate swaps. The CVA represents a portfolio-level adjustment to reflect the risk premium associated with the counterparty's (assets) or Citi's (liabilities) non-performance risk. FVA reflects a market funding risk premium inherent in the uncollateralized portion of derivative portfolios and in certain collateralized derivative portfolios that do not include standard credit support annexes (CSAs), such as where the CSA does not permit the reuse of the collateral received.

### **Market Risk-Weighted Assets**

Under the U.S. Basel III rules, Citi's market risk-weighted assets (RWA) are measured as the sum of the risk-weighted assets attributable to the following:

- Regulatory Value-at-Risk (VaR)
- Regulatory Stressed Value-at-Risk (SVaR)
- Incremental Risk Charge (IRC)
- Comprehensive Risk Measure (CRM)
- Standard Specific Risk Charge (SSRC)
- Securitization Charges
- De minimis Exposures Charge (covered positions not included in the VaR model)

Citi's Basel III market risk capital requirements, and related risk-weighted assets, reflect the application of Citi's internal models as well as prescribed standardized approaches with respect to covered positions, as appropriate. Liquidity attributes of Citi's covered positions are considered in the determination of model eligibility in measuring market risk capital requirements. Citi's internal models are designed to capture all material risk factors. Any material missing risk factors that are identified through model validation (see "*Independent Validation of Models*" section below), are included as a RNIM "add-on" in accordance with the U.S. Basel III rules.

Citi's market risk capital requirements and resulting risk-weighted assets will vary from reporting period to reporting period and may be materially impacted by changes in the treatment of certain positions or portfolios, due to updated regulatory guidance, regulatory reviews or further refinements and enhancements to Citi's internal models. Where material, such changes are disclosed in Citi's Basel III Advanced Approaches Disclosures and/or in Citi's Form 10-K or 10-Q, as appropriate, in the reporting period during which the changes were implemented.

### **Regulatory Value-at-Risk (VaR)**

Regulatory VaR is the estimate of the potential decline in the value of a position or a portfolio under normal market conditions. Citi uses a three year (18 months for commodities) look back period for correlations between risk factors and the greater of three-year (18 months for commodities) or, in most instances, effectively 30-day volatility. These market risk factors include material first and second-order risk sensitivities of various asset classes/risk types (such as interest rate, credit spread, foreign exchange, equity, and commodity risks).

Citi uses a single, independently approved Monte Carlo simulation VaR model for both Regulatory VaR and Risk Management VaR. As of March 31, 2022, the Monte Carlo simulation involves approximately 550,000 market factors, making use of approximately 480,000 time series, with sensitivities updated daily, volatility parameters updated intra-month and correlation parameters updated monthly. The portfolio composition of Citi's Regulatory VaR is, however, materially different from Citi's Risk Management VaR. Certain positions that are included in Citi's Risk Management VaR are not covered positions and therefore are not eligible for market risk capital treatment under the U.S. Basel III rules. While Citi's confidence interval is 99% for both Risk Management VaR and Regulatory VaR, Citi uses a 1-day time horizon for Risk Management VaR

and a 10-day time horizon for Regulatory VaR. For additional information on Citi's Risk Management VaR model, see "Managing Global Risk—Market Risk—Market Risk of Trading Portfolios" in Citi's 2022 Form 10-K (The number of market factors and time series quoted in Citi's 2022 Form 10-K is updated as shown above).

For covered positions that are not captured in Regulatory VaR, Citi calculates market risk-weighted assets based on a de minimis risk add-on in accordance with the Basel III requirements, or in accordance with an alternative methodology that has been approved by the FRB and OCC.

The following table presents Citi's Regulatory VaR and related capital requirement, as well as risk-weighted assets as of December 31, 2022.

**Table 21: Regulatory VaR Risk-Weighted Assets**

<i>In millions of dollars</i>	<b>As of December 31, 2022</b>	
<b>Regulatory VaR<sup>(1)</sup></b>	<b>Regulatory VaR-Based Capital<sup>(2)</sup></b>	<b>Regulatory VaR RWA<sup>(3)</sup></b>
\$ 262	\$ 785	\$ 12,456

(1) 60-day average, for which each daily Regulatory VaR is based on a 10-day time horizon.

(2) Regulatory VaR times a capital multiplier of 3.

(3) Regulatory VaR-Based Capital times 12.5 plus \$2,646 million add-on for RNIM (equivalent of \$212 million capital).

- Immaterial differences in calculations above may exist due to rounding.

Presented in the following table are Citi's period end and high, low and mean Regulatory VaR, as well as associated primary risk factors, as of and for the three months ended December 31, 2022.

**Table 21.1: 10-Day Regulatory VaR by Risk Factors**

<i>In millions of dollars</i>	<b>December 31, 2022</b>	<b>Three Months Ended December 31, 2022</b>		
<b>Risk Factors</b>		<b>High</b>	<b>Low</b>	<b>Mean<sup>(1)</sup></b>
Interest Rate	\$ 245	\$ 331	\$ 132	\$ 237
Credit Spread	236	310	208	251
Equity Price	39	61	17	26
Foreign Exchange	56	298	17	70
Commodity Price	110	334	110	167
Diversification Benefit <sup>(2)</sup>	(400)	NM	NM	(489)
<b>VaR</b>	<b>\$ 286</b>	<b>\$ 324</b>	<b>\$ 174</b>	<b>\$ 262</b>

- NM: Not meaningful

(1) Mean is based on a 60-day average used for Regulatory VaR-based RWA.

(2) Diversification benefit is the result of correlation between risk factors and, due to this benefit, the total Regulatory VaR on a given day will be lower than the sum of the Regulatory VaRs relating to each individual risk factor. No diversification benefit can be inferred for the high and low Regulatory VaRs related to each of the respective risk factors as they may come from different close of business dates.

The following table presents the period end and high, low and mean Regulatory VaR for each of Citi's material portfolios of covered positions, as of and for the three months ended December 31, 2022.

**Table 21.2: 10-Day Regulatory VaR by Material Portfolios**

<i>In millions of dollars</i>	<b>As of December 31, 2022</b>	<b>Three Months Ended December 31, 2022</b>		
<b>Material Portfolios</b>		<b>High</b>	<b>Low</b>	<b>Mean<sup>(1)</sup></b>
ICG	\$ 288	\$ 323	\$ 177	\$ 262
Other <sup>(2)</sup>	6	7	5	6
Diversification Benefit <sup>(3)</sup>	(8)	NM	NM	(6)
<b>Total Regulatory VaR</b>	<b>\$ 286</b>	<b>\$ 324</b>	<b>\$ 174</b>	<b>\$ 262</b>

- NM: Not meaningful

(1) 60-day average, for which each daily Regulatory VaR is based on a 10-day time horizon.

(2) Primarily related to Corporate Treasury covered positions.

(3) Diversification benefit is the result of correlation between portfolios and, due to this benefit, the total Regulatory VaR on a given day will be lower than the sum of the Regulatory VaRs relating to each individual portfolio. No diversification benefit can be inferred for the high and low of respective portfolios as they may come from different close of business dates.

### **Regulatory VaR Backtesting**

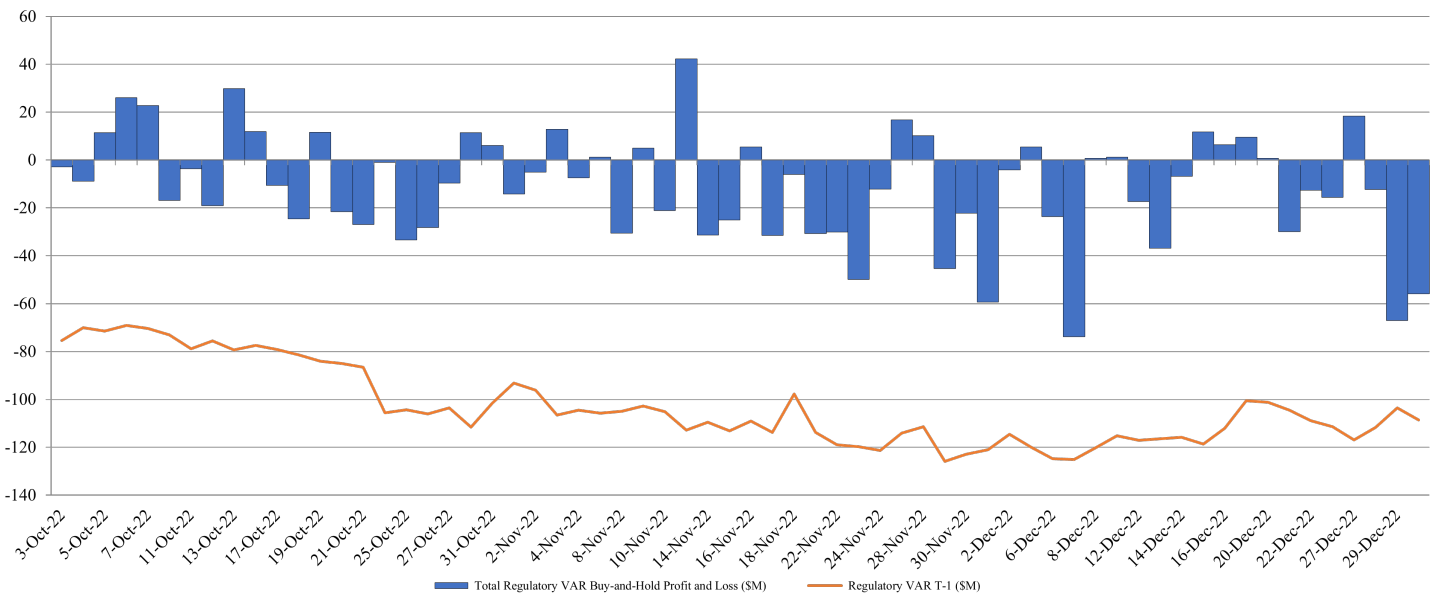

In accordance with the U.S. Basel III rules, Citi is required to perform backtesting to evaluate the effectiveness of its VaR model and as a basis to determine its Regulatory VaR and Regulatory SVaR-based capital multiplier. For additional information on Regulatory SVaR, see “*Regulatory Stressed Value-at-Risk (SVaR)*” section below. Regulatory VaR backtesting is the process in which the daily 1-day VaR, at a 99% confidence interval, is compared to the buy-and-hold profit and loss, which represents the daily mark-to-market profit and loss attributable to price movements in covered positions from the close of the previous business day. Buy-and-hold revenue excludes realized trading revenue, net interest, fees and commissions, intra-day trading profit and loss, and changes in reserves.

Citi’s Regulatory VaR and Regulatory SVaR capital multipliers, which can range between 3 and 4, are based upon the number of backtesting exceptions that occur on a rolling 12-month period, as well as the discretion of the FRB and OCC. Based on a 99% confidence level, Citi would expect two to three days in any one year where buy-and-hold losses exceeded the Regulatory VaR. Given the conservative calibration of Citi’s VaR model (as a result of taking the greater of short- and long-term volatilities and fat tail scaling of volatilities), Citi would expect fewer exceptions under normal and stable market conditions. Periods of unstable market conditions could increase the number of backtesting exceptions.

The graph below presents the daily buy-and-hold profit and loss associated with all of Citi’s covered positions compared to Citi’s 1-day Regulatory VaR from October 1, 2022 through December 31, 2022. As the graph indicates, losses observed have not exceeded Citi’s 1-day 99% Regulatory VaR during the three month period ending December 31, 2022.

# Regulatory VaR Backtesting Results

## One-Day 99% Regulatory VAR and Associated Buy-and-Hold Profit and Loss (\$M)

## Regulatory Stressed Value-at-Risk (SVaR)

Citi's Regulatory SVaR model methodology is the same as the Regulatory VaR methodology (99% confidence level and 10-day holding period), with the exception of the look back period. Specifically, the Regulatory SVaR uses model parameters such as volatilities and correlations calibrated to historical data from a continuous 12-month period that reflects significant financial stress appropriate to current portfolios. The Regulatory SVaR look back period is periodically calibrated using internal Citi methodologies and policies to determine the most severe stress period for Citi's current covered positions.

The following table presents Citi's Regulatory SVaR and related capital requirement, as well as risk-weighted assets as of December 31, 2022.

**Table 22: Regulatory SVaR Risk-Weighted Assets**

<i>In millions of dollars</i>	<b>As of December 31, 2022</b>	
<b>Regulatory SVaR<sup>(1)</sup></b>	<b>Regulatory SVaR-Based Capital<sup>(2)</sup></b>	<b>Regulatory SVaR RWA<sup>(3)</sup></b>
\$ 384	\$ 1,151	\$ 22,703

(1) 60-day average, for which each daily Regulatory SVaR is based on a 10-day time horizon.

(2) Regulatory SVaR times a capital multiplier of 3.

(3) Regulatory SVaR-Based Capital times 12.5 plus \$8,312 million add-on for RNIM (equivalent of \$665 million capital).

- Immaterial differences in calculations above may exist due to rounding.

The following table presents period end and high, low and mean Regulatory SVaR, for each of Citi's material portfolios of covered positions, as of and for the three months ended December 31, 2022.

**Table 22.1: 10-Day Regulatory SVaR by Material Portfolios**

<i>In millions of dollars</i>	<b>As of December 31, 2022</b>	<b>Three Months Ended December 31, 2022</b>		
<b>Material Portfolios</b>		<b>High</b>	<b>Low</b>	<b>Mean<sup>(1)</sup></b>
ICG	\$ 519	\$ 580	\$ 290	\$ 386
Other <sup>(2)</sup>	9	10	9	9
Diversification Benefit <sup>(3)</sup>	(10)	NM	NM	(11)
<b>Total Regulatory SVaR</b>	<b>\$ 518</b>	<b>\$ 575</b>	<b>\$ 291</b>	<b>\$ 384</b>

- NM: Not meaningful

(1) 60-day average, for which each daily Regulatory SVaR is based on a 10-day time horizon.

(2) Primarily related to Corporate Treasury covered positions.

(3) Diversification benefit is the result of correlation between portfolios and, due to this benefit, the total Regulatory SVaR on a given day will be lower than the sum of the Regulatory SVaRs relating to each individual portfolio. No diversification benefit can be inferred for the high and low of respective portfolios as they may come from different close of business dates.

## Incremental Risk Charge (IRC)

IRC represents a charge to cover the default and credit migration risks of non-securitized credit products. IRC is measured over a 1-year time horizon at a 99.9% confidence level under the assumption of constant positions. A constant position assumption means that Citi maintains the same set of positions throughout the 1-year time horizon (regardless of the maturity date of the positions) in order to model profit and loss distributions. Liquidity horizons establish the effective holding period of the assets and are defined as the time that would be required to reduce exposure, or hedge all material risks, in a stressed market environment.

Citi's IRC model is designed to capture market and issuer-specific concentrations, credit quality and liquidity horizons and recognizes the impact of correlations between default and credit migration events among issuers.

Presented in the following table is Citi's IRC and IRC risk-weighted assets as of December 31, 2022.

**Table 23: IRC Risk-Weighted Assets**

<i>In millions of dollars</i>	<b>As of December 31, 2022</b>	
<b>IRC<sup>(1)</sup></b>	<b>IRC RWA<sup>(2)(3)</sup></b>	
\$ 266	\$ 3,919	

(1) IRC is calculated once per week.

(2) IRC-based RWA is calculated using the greater of the mean and period end IRC charge (see table 23.1 below).

(3) IRC RWA is IRC times 12.5 plus \$588 million add-on for RNIM. IRC RWA (equivalent of \$47 million capital).

- Immaterial differences in calculation above may exist due to rounding.

Presented in the following table is the period end and high, low and mean IRC for each of Citi's material portfolios of covered positions as of and for the three months ended December 31, 2022.

**Table 23.1: IRC by Material Portfolios**

<i>In millions of dollars</i>	<b>As of December 31, 2022</b>	<b>Three Months Ended December 31, 2022</b>		
<b>Material Portfolios</b>		<b>High</b>	<b>Low</b>	<b>Mean</b>
ICG	\$ 174	\$ 459	\$ 174	\$ 266
Other <sup>(1)</sup>	—	—	—	—
Diversification Benefit <sup>(2)</sup>	—	NM	NM	—
<b>Total IRC</b>	<b>\$ 174</b>	<b>\$ 459</b>	<b>\$ 174</b>	<b>\$ 266</b>

- NM: Not meaningful

## Comprehensive Risk Measure (CRM)

CRM is primarily comprised of correlation trading securitization positions within *ICG Markets and Securities Services*.

Credit correlation products refer to portfolio-based tranche products and their hedges. The primary inputs to the valuation model used to price and risk manage these tranche products are credit default swap spreads and correlations between the individual credits within the portfolios. Correlation trading positions include both index and bespoke tranches, where index tranches mainly reference U.S. and European credit indices.

Citi received supervisory approval to remove the previously required CRM model surcharge for correlation trading portfolios. Accordingly, the calculation of the CRM under the U.S. Basel III rules is equal to the greater of two components: (i) a model-based measure and (ii) total specific risk add-ons for Citi's modeled correlation trading positions (CRM Floor), which is calculated as 8% of the greater of: (1) the sum of Citi's specific risk add-ons for each net long correlation trading position, or (2) the sum of Citi's specific risk add-ons for each net short correlation trading position (both of which are calculated after permitted matching and offsetting under the U.S. Basel III rules).

The model-based measure of the CRM is an extension of the IRC model discussed above. Citi's CRM price risk model is based on a full revaluation of the portfolio inclusive of all material risk factors. Citi's CRM model uses a Monte Carlo simulation (like the IRC model); however, the CRM model includes additional risk factors that are only relevant for Citi's correlation trading portfolio.

Citi's CRM model is intended to capture all material price risk including, but not limited to, the risks associated with the contractual structure of cash flows of the position, the issuer, and the underlying exposures. Through the use of these market risk factors the model simulates default risk and credit migration risk over a 1-year time horizon with a 99.9% confidence interval, under the assumption of constant positions.

The following tables present Citi's CRM risk-weighted assets and market risk factors as of December 31, 2022, as well as the period end, and high, low and mean CRM Charge, as of and for the three months ended December 31, 2022.

**Table 24: CRM Risk-Weighted Assets**

<i>In millions of dollars</i>	<b>As of December 31, 2022</b>		
<b>CRM Charge<sup>(1)</sup></b>	<b>CRM-Based RWA<sup>(2)</sup></b>	<b>8% CRM Floor<sup>(3)</sup></b>	<b>Total CRM RWA<sup>(4)</sup></b>
\$ 72	\$ 901	\$ 566	\$ 901

(1) CRM Charge is calculated once per week.

(2) CRM-Based RWA is calculated using the greater of the mean and period end CRM Charge (see Table 24.1 below), multiplied by 12.5.

(3) The CRM Floor is based on the fair value of net long positions (inclusive of netting).

(4) Total CRM RWA = Greater of (2) CRM-Based RWA and (3) 8% CRM Floor.

• Immaterial differences in calculations above may exist due to rounding.

**Table 24.1: CRM Charge**

<i>In millions of dollars</i>	<b>As of</b>			
	<b>December 31, 2022</b>	<b>Three Months Ended</b>		
		<b>High</b>	<b>Low</b>	<b>Mean</b>
<b>CRM Charge</b>	\$ 66	\$ 79	\$ 63	\$ 72

**Table 24.2: CRM Market Risk Factors**

<i>In millions of dollars</i>	<b>As of</b>
	<b>December 31, 2022</b>
Default Risk	\$ 30
Recovery Rate Risk	9
Credit Spread Risk <sup>(1)</sup>	15
Cross Gamma Risk	(1)
Correlation Risk	13
<b>Total CRM Charge<sup>(2)</sup></b>	<b>\$ 66</b>

(1) Credit spread risk includes credit migration risk.

(2) Total CRM Charge is inclusive of diversification benefits across risk factors and are additive.

The following table presents the net market value of Citi's correlation trading securitization positions included in the CRM model, inclusive of all hedges, as of December 31, 2022. Correlation trading securitization positions that are not included in the CRM model are included in Table 26 "*Covered Trading Securitization and Re-Securitization Positions (Non-CRM Modeled)*" below.

**Table 24.3: Correlation Trading Securitization Positions (Included in CRM Model)**

<i>In millions of dollars</i>	<b>As of</b>
	<b>December 31, 2022</b>
Net Long Market Value	\$ 8,619
Net Short Market Value	(5,404)
<b>Total Net Market Value</b>	<b>\$ 3,215</b>

## Standard Specific Risk Charge (SSRC)

Specific risk is the risk of loss from changes in the market value of a position that could result from factors other than broad market movements and includes event risk, default risk and idiosyncratic risk.

Standard specific risk charges are derived for any debt or equity positions which have not received a modeled specific risk charge or a modeled (SFA) or a non-modeled (SSFA) securitization charge. Under the U.S. Basel III rules, standard specific risk charges are calculated by applying prescribed risk-weighting factors to debt, equity, and securitization positions, which for cash instruments is based on the fair market value, whereas for derivatives is based on the fair value of the effective notional amount. Moreover, the prescribed risk-weighting factors for debt positions are based on particular attributes, such as issuer type, remaining contractual maturity, country risk ratings, Organization for Economic Cooperation and Development membership status, and investment grade/non-investment grade status.

## Securitization and Re-securitization Positions

For a description of Citi's involvement in securitization and re-securitization transactions, see "Securitizations" above.

The following table presents the net market value of Citi's non-modeled trading book securitization and re-securitization positions (i.e., excluding modeled correlation trading securitization positions), by product type, as of December 31, 2022.

**Table 25: Covered Trading Securitization and Re-securitization Positions (Non-CRM Modeled)**

<i>In millions of dollars</i>			
<b>As of December 31, 2022</b>			
<b>Exposure Type</b>	<b>On-Balance Sheet<sup>(1)</sup></b>	<b>Off-Balance Sheet<sup>(2)</sup></b>	<b>Total</b>
CMBS	\$ 604	\$ 254	\$ 858
RMBS	967	37	\$ 1,004
CDOs/CLOs	1,102	9	\$ 1,111
Other ABS	413	12	\$ 425
	<b>\$ 3,086</b>	<b>\$ 312</b>	<b>\$ 3,398</b>

(1) The net market value of cash securitization positions that received non-modeled securitization charges.

(2) The net market value of derivative positions that received non-modeled securitization charges.

- Immaterial differences in calculations above may exist due to rounding.

## De minimis Exposures Charge

As previously noted, a de minimis exposures charge is applied to covered positions that are not captured in Citi's Regulatory VaR model. The sum of the absolute value of these positions is multiplied by 12.5 to arrive at the applicable RWA under the U.S. Basel III rules.

## Market Risk Management

### Overview

Citi manages the market risk of covered positions in its trading and non-trading portfolios under established standards, policies, and governance frameworks that were created or enhanced to ensure that Basel III market risk capital charges are only applied to covered positions and that non-covered trading book positions receive the appropriate credit risk capital charges. Citi's policies have been reviewed by the FRB and OCC. For additional information regarding Citi's market risk management generally, see "Managing Global Risk—Market Risk—Overview" in Citi's 2022 Form 10-K.

The market risk of Citi's trading portfolio of covered positions encompasses, among other things, price risk losses. Price risk losses arise from fluctuations in the market value of covered positions due to changes in interest rates, credit spreads, foreign exchange rates, equity and commodity prices, as well as changes in the implied volatility for option products referencing these markets. Citi's non-trading portfolio of covered positions also experiences fluctuations in market value resulting from changes in foreign exchange and commodity prices.

Market risk is calculated in accordance with established standards to ensure consistency across Citi's businesses and enable market risk sensitivities to be aggregated. The

measurement used for covered trading positions and non-covered trading positions include:

- VaR
- Stress Testing
- Factor Sensitivities
- Internal Model Review and Validation

Citi requires that its *PBWM* and *ICG* business segments establish, with approval from Citi's market risk management, a market risk limit framework for identified risk factors that clearly defines approved risk profiles and is within the parameters of Citi's overall risk tolerance and internal capital adequacy standards. These limits are monitored by Citi's independent market risk management organization, Citi's country and business Asset and Liability Committees and Citigroup's Asset and Liability Committee. Included in this limit framework are additional controls which detail trading mandates, permitted product lists, and a new product approval process for complex products. Ultimately, Citi's businesses are responsible for the market risks taken and for remaining within their defined limits, as well as ensuring that covered positions are managed in accordance with Citi's internal policies.

Citi's independent market risk management and Product Control within Finance periodically review covered positions to confirm both the realization of intent and ability to trade. Positions failing to meet the criteria of intent and ability to trade are reclassified as non-trading book positions and will be subject to the credit risk capital rules.

## Securitization and Re-securitization Positions

Citi manages its securitization and re-securitization positions within an established risk management policy framework whereby each business and Citi's market risk management work collaboratively to monitor the covered trading book securitization positions, changes in positions, and changes in the portfolio structure. This includes, but is not limited to, the review of approved risk limits versus daily positions using risk measures such as market values, risk factor sensitivities and stress loss scenarios. Securitization due diligence analysis is completed in accordance with the requirements of the U.S. Basel III rules, including pre-trade analysis and supporting documentation within three days of the trade date. The analysis demonstrates a comprehensive understanding of the features of a securitization that would materially affect the performance of the position. On a quarterly basis, follow-up reviews are performed to evaluate and update the securitization risk characteristics as appropriate.

Citi manages the risk appetite for all covered securitization and re-securitization positions through a limit structure which is approved annually by market risk management. These limits measure market value of positions, risk factor sensitivities, VaR and SVaR on a daily basis. In addition, regulatory risk capital and risk-weighted assets for specific risk measures are calculated monthly and are subject to a defined set of controls and governance within market risk, regulatory risk and finance management. This includes, but is not limited to, a review of the exposure classification and application of treatment type hierarchy which is used to verify compliance for securitization transactions under the U.S. Basel III rules.

Clarifications to interpretive questions are issued through a formal capital interpretive forum and are reported to senior management. Citi's risk management framework includes a weekly scenario analysis in which all underlying risk factors are stressed to determine portfolio sensitivity under stressed conditions.

Citi employs several risk mitigation approaches to manage risk appetite for its securitization and re-securitization positions. Counterparty credit risk positions are approved through credit risk management policies and procedures. Securitization and re-securitization positions are subject to product limits to ensure diversification in Citi's portfolio. These limits include mezzanine re-securitization position limits.

Citi also uses a variety of hedging strategies for its covered positions, including corporate index hedges, to mitigate systemic price and spread risks. Business trading desks make hedging decisions based on current market conditions in accordance with hedging strategies residing under Citi's market risk management policy framework. Citi's material hedging decisions are made in consultation with Citi's risk management organization and the Citigroup Executive Committee, as appropriate. Any hedging proposals outside the scope of previously approved products would require approval by the relevant NAC resident within ICG.

#### ***Independent Validation of Models***

Market risk models are independently validated by Model Risk Management and approved for use. Generally, Citi's model validation process involves evaluation of conceptual soundness including key assumptions, effective challenge of the model design and construction, identification of model limitations and incremental analysis and testing as necessary. In addition, market risk models are subject to periodic model risk assessment, ongoing performance monitoring, outcomes analysis, annual model review, ongoing model validation, and model change management as required under the Citi Model Risk Management Policy.

In addition, as part of the model validation process, product specific backtesting on hypothetical portfolios is periodically performed. Furthermore, Citi performs backtesting against the actual change in market value of transactions on a monthly basis at multiple levels of the organization (trading desk, ICG business, and company-wide), and shares the results with the FRB and OCC.

In addition, the FRB and OCC periodically review and approve significant model and assumption changes.

#### ***Stress Testing***

Citi performs stress testing on a regular basis to estimate the impact of extreme market movements. It is performed on individual positions, trading portfolios, as well as in aggregate inclusive of multiple trading portfolios. Citi's independent market risk management organization, after consultations with the businesses, develops both systemic and specific stress scenarios, reviews the output of periodic stress testing exercises, and uses the information to make judgments on the ongoing appropriateness of exposure levels and limits. Citi uses two complementary approaches to market risk stress testing across all major risk factors (i.e., equity, foreign exchange, commodity, interest rate and credit spreads): top-down systemic stresses and bottom-up business specific stresses. Systemic stresses are designed to quantify the potential impact of extreme market movements on a firm-wide basis, and are constructed using both historical periods of market stress and projections of adverse economic scenarios. Business specific stresses are designed to probe the risks of particular portfolios and market segments, especially those risks that are not fully captured in VaR and systemic stresses.

## OPERATIONAL RISK

---

### Overview

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. This includes legal risk, which is the risk of loss (including litigation costs, settlements, and regulatory fines) resulting from the failure of Citi to comply with laws, regulations, prudent ethical standards, and contractual obligations in any aspect of its businesses, but excludes strategic and reputation risks. Citi also recognizes the impact of operational risk on the reputation risk associated with Citi's business activities.

Operational risk is inherent in Citi's global business activities, as well as related support processes, and can result in losses arising from events associated with the following, among others:

- fraud, theft and unauthorized activity;
- employment practices and workplace environment;
- clients, products and business practices;
- physical assets and infrastructure; and
- execution, delivery and process management.

### Operational Risk Measurement

Under the U.S. Basel III rules, Citi is required to employ an Advanced Measurement Approaches (AMA) model in deriving its operational risk capital.

Pursuant to the AMA model, Citi utilizes units of measure which group like risks and separate heterogeneous risks for the purpose of analysis and quantification. These units of measure are defined primarily by the type of operational risk event (e.g., fraud or employment practices), but also consider the respective business unit(s) and geography(ies). For each of these units of measure, potential loss severity and frequency are modeled independently. The potential loss severity is based on Citi's historical (internal) operational risk loss data, as well as historical industry (external) operational risk loss data. Citi employs a selection process with regard to historical industry operational risk loss events, which involves the identification in the relevant business(es) and operational risk management of historical industry operational risk losses that are relevant to Citi, based on the line of business(es) and operational risk exposure by event type. The mean frequency of operational risk losses is estimated from Citi's internal experience. The modeled operational risk losses across the units of measure are aggregated, considering correlation in operational risk losses across measurement units. The results are subsequently modified each quarter by applying a "qualitative adjustment factor" to reflect the current business and control environment.

Further, Citi conducts scenario analysis by major global business, as a systematic process for obtaining the opinions of business managers and risk management experts, in order to derive reasoned assessments of the likelihood and loss impact of plausible, high severity operational risk losses. These scenarios are then used to benchmark the model results.

Moreover, Citi uses insurance for the purpose of partially mitigating operational risk; however, such insurance does not have a material impact on Citi's operational risk capital.

### Independent Review of Models

Operational risk models are independently validated by Model Risk Management and approved for use. Generally, Citi's model validation process involves evaluation of conceptual soundness including key assumptions, effective challenge of the model design and construction, identification of model limitations and incremental analysis and testing as necessary. In addition, operational risk models are subject to periodic model risk assessment, ongoing performance monitoring, outcomes analysis, annual model review, ongoing model validation, and model change management as required under the Citi Model Risk Management Policy.

For additional information on operational risk, "*Managing Global Risk—Operational Risk*" in Citi's 2022 Form 10-K.

## INTEREST RATE RISK: NON-TRADING ACTIVITIES

---

For information on Citi’s interest rate risk related to non-trading activities, see “*Managing Global Risk—Market Risk—Market Risk of Non-Trading Portfolios*” in Citi’s 2022 Form 10-K.

## SUPPLEMENTARY LEVERAGE RATIO

---

For information on Citi's Supplementary Leverage ratio, and related components, see "*Capital Resources*" in Citi's 2022 Form 10-K and Schedule A in Citi's Fourth Quarter 2022 FFIEC 101 Report.

**Advanced Approaches banking organization** is, in general, a U.S. banking organization with consolidated total assets of at least \$250 billion or consolidated total on-balance sheet foreign exposures of at least \$10 billion.

**Banking book** refers to exposures not included in the trading book.

**Black-Scholes** is a mathematical methodology for valuing derivatives of financial securities such as equity or bond options that takes into account whether an option is in or out of the money, the volatility of the underlying exposure, the time to expiration of the option, whether the option is a put or a call and the current rate of return on a risk-free asset such as a U.S. Treasury bill.

**Capital Conservation Buffer**, which is to be composed solely of Common Equity Tier 1 Capital, is equal to the lowest of the following risk-based capital ratios (subject to a floor of zero), calculated as of the last day of the previous calendar quarter based on the banking organization's most recent regulatory report:

- (1) The banking organization's Common Equity Tier 1 Capital ratio minus the banking organization's stated minimum Common Equity Tier 1 Capital ratio requirement;
- (2) The banking organization's Tier 1 Capital ratio minus the banking organization's stated minimum Tier 1 Capital ratio requirement; and
- (3) The banking organization's Total Capital ratio minus the banking organization's stated minimum Total Capital ratio requirement.

**Central counterparty** is a counterparty (for example, a clearing house) that facilitates trades between counterparties in one or more financial markets by either guaranteeing trades or novating contracts.

**Confidence interval** measures the probability that a population parameter will fall between two set values. The confidence interval can take any number of probabilities, with the most common being 95% or 99%.

**Credit valuation adjustment** is the fair value adjustment to reflect counterparty credit risk in the valuation of OTC derivative contracts.

**Distribution** means:

(1) A reduction of Tier 1 Capital through the repurchase of a Tier 1 Capital instrument or by other means, except when a banking organization, within the same quarter when the repurchase is announced, fully replaces a Tier 1 Capital instrument it has repurchased by issuing another capital instrument that meets the eligibility criteria for:

(i) A Common Equity Tier 1 Capital instrument if the instrument being repurchased was part of the banking organization's Common Equity Tier 1 Capital, or

(ii) A Common Equity Tier 1 or Additional Tier 1 Capital instrument if the instrument being repurchased was part of the banking organization's Tier 1 Capital;

(2) A reduction of Tier 2 Capital through the repurchase, or redemption prior to maturity, of a Tier 2 Capital instrument or by other means, except when a banking organization, within the same quarter when the repurchase or redemption is announced, fully replaces a Tier 2 Capital instrument it has repurchased by issuing another capital instrument that meets the eligibility criteria for a Tier 1 or Tier 2 Capital instrument;

(3) A dividend declaration or payment on any Tier 1 Capital instrument;

(4) A dividend declaration or interest payment on any Tier 2 Capital instrument if the banking organization has full discretion to permanently or temporarily suspend such payments without triggering an event of default; or

(5) Any similar transaction that the U.S. banking agency (e.g., FRB) determines to be in substance a distribution of capital.

**Eligible retained income** is equal to the greater of: (i) the banking organization's net income for the four calendar quarters preceding the current calendar quarter, net of any distributions and tax effects not already reflected in net income, and (ii) the average of the banking organization's net income for the four calendar quarters preceding the current calendar quarter.

**Event risk** is the risk of loss on equity or hybrid equity positions as a result of a financial event, such as a company merger, acquisition, spin-off, or dissolution.

**Exchange traded derivatives** include derivatives executed directly on an organized exchange that provides pre-trade price transparency.

**Fair value hierarchy** is defined by ASC 820-10 as follows:

- Level 1 inputs as quoted prices for *identical* instruments in active markets;
- Level 2 inputs as quoted prices for *similar* instruments in active markets; quoted prices for identical or similar instruments in markets that are not active; and model-derived valuations in which all significant inputs and significant value drivers are *observable* in active markets; and
- Level 3 inputs as valuations derived from valuation techniques in which one or more significant inputs or significant value drivers are *unobservable*.

**Fat-tailed distribution** is a probability distribution for which the likelihood of a large deviation from the mean is greater than would be implied by a normal distribution.

**FICO score** independent credit agencies in the U.S. rate an individual's risk for assuming debt based on the individual's credit history and assign every consumer a "FICO" credit score. These scores are continually updated by the agencies based upon an individual's credit actions (e.g., taking out a loan or missed or late payments).

**Financial assets** may be loans, asset-backed securities, mortgage-backed securities, other debt securities, equity securities, receivables, commitments, guarantees or credit derivatives.

**Idiosyncratic risk** is the risk of loss in the value of a position that arises from changes in risk factors unique to that position.

**ISDA** refers to International Swap Dealers Association.

**LIBOR** refers to London Interbank Offered Rate.

**Monte Carlo simulation** is a statistical technique, widely used in finance, engineering, and physics, for simulating outcomes of complex processes. Citi's use of Monte-Carlo simulation to calculate the potential loss of market value of a trading portfolio rests on measurements of the volatilities and correlations of the market rates that affect the market value of the portfolio and on the sensitivities of the market value of the portfolio to changes in market rates.

**Netting set** is a group of transactions with a single counterparty that are subject to a qualifying master netting agreement.

**Over-the-counter derivatives** include derivatives executed and settled bilaterally with counterparties without the use of an organized exchange or central clearing house.

**Potential future exposure** is an add-on for expected future credit exposure related to OTC derivative contracts, and is based on the type and remaining maturity of the derivative contract.

**Pillar 3** is a component of a mutually reinforcing three pillar capital framework established by the U.S. Basel II rules, and sets forth minimum disclosure requirements for banking organizations which are intended to improve transparency and strengthen market discipline.

**Qualifying revolving exposure**, generally, is an exposure which is revolving, is unsecured and unconditionally cancelable by the banking organization.

**Retail exposure** is a residential mortgage exposure, a qualifying revolving exposure, or an other retail exposure.

**Scaling factor** is a number which scales, or multiplies, some quantity.

**Segmentation for retail exposures** is required under the U.S. Basel III rules, and means the grouping of retail exposures in each retail subcategory into segments that have homogeneous risk characteristics.

**Specific risk** is the risk of loss from changes in the market value of a position that could result from factors other than broad market movements, and includes event risk, default risk and other idiosyncratic risks of specific issuers of debt or equity securities.

**Structural foreign currency position** is a position that is not a trading position and that is: (1) subordinated debt, equity, or a minority interest in a consolidated subsidiary that is denominated in a foreign currency; (2) capital assigned to a foreign branch that is denominated in a foreign currency; (3) a position related to an unconsolidated subsidiary or another item that is denominated in a foreign currency and that is deducted from the banking organization's Tier 1 or Tier 2 Capital; or (4) a position designed to hedge a banking organization's capital ratios or earnings.

**Synthetic securitization** is a transaction in which all or a portion of the credit risk of one or more underlying exposures is retained or transferred to one or more third parties through the use of one or more credit derivatives or guarantees, and the credit risk associated with the underlying exposures has been separated into at least two tranches reflecting different levels of seniority.

**Systematic risk** is a broad class of market risk that is differentiated from the specific risk of individual issuers of debt and equity securities. Examples of systematic risk include the risk of changes in equity indices, commodity prices, the U.S. Treasury yield curve, spot foreign exchange rates, and average credit spreads per rating and currency. In contrast, examples of specific risk include the risk of changes in the component of the spread of a specific bond or the price of a specific equity that are caused by factors idiosyncratic to the issuer of the security.

**Two-way market** means a market where there are independent bona fide offers to buy and sell so that a price reasonably related to the last sales price or current bona fide competitive bid and offer quotations can be determined within one day and settled at that price within a relatively short timeframe conforming to trade custom.

**U.S. GAAP** refers to generally accepted accounting principles in the United States.

**Wholesale exposure** is a credit exposure to a company, natural person, sovereign, or governmental entity (other than a securitization exposure, retail exposure, pre-sold construction loan, unsettled transaction, or equity exposure).
